# 20 anos de inovação

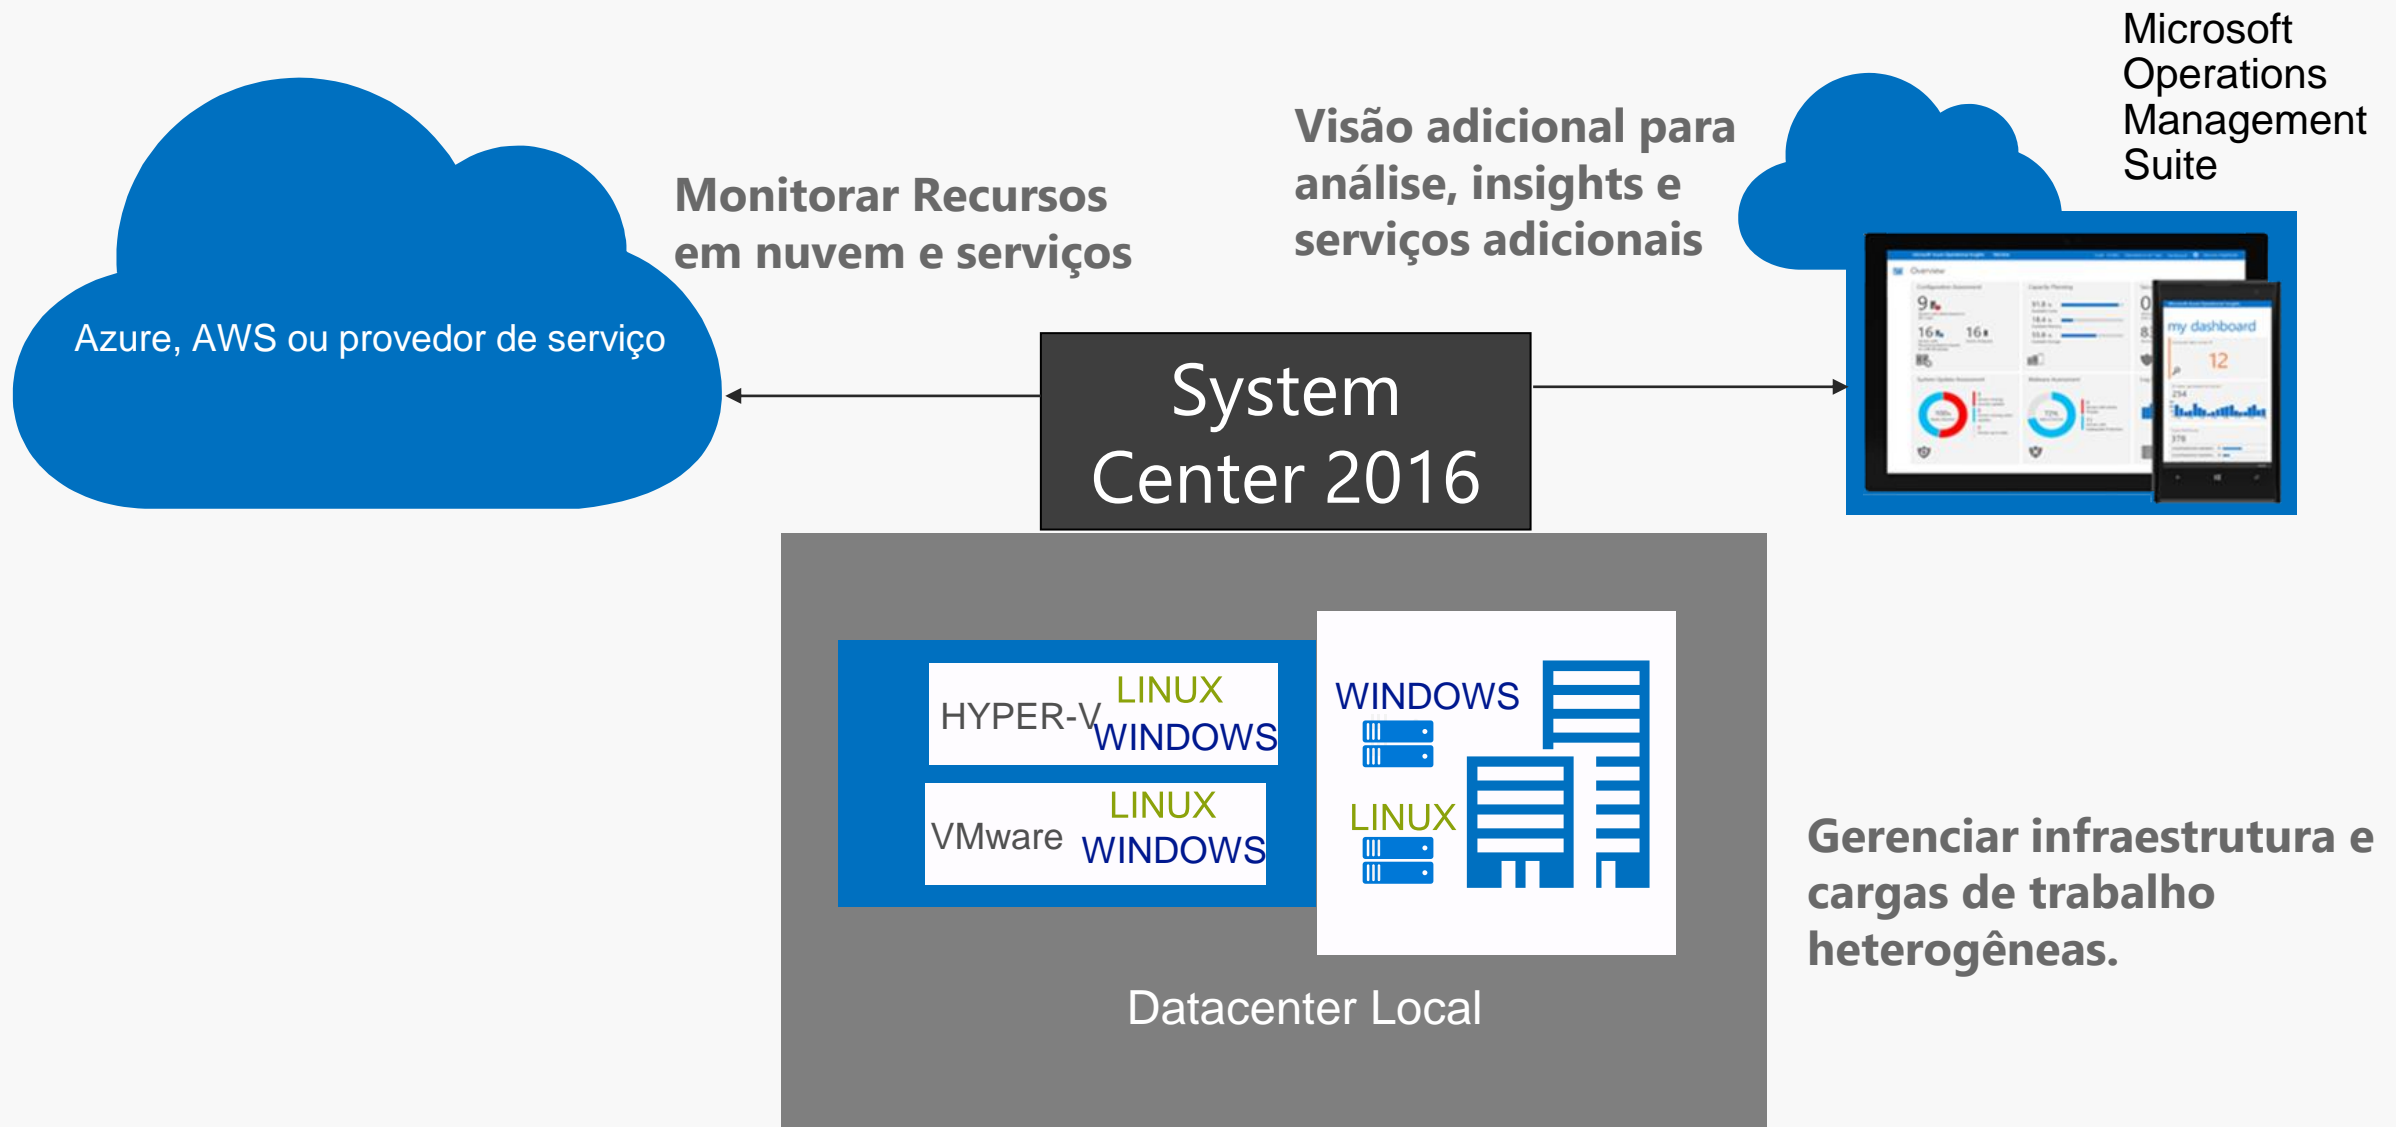

[www.20yearsofwindowsserver.com](http://www.20yearsofwindowsserver.com)

# Pontos de design do Windows Server

- ① Fornecer segurança em camadas contra ameaças emergentes.
- ② Criar o datacenter definido por software.
- ③ Criar uma plataforma de aplicativos otimizada para a nuvem.

# O que você consegue com System Center 2016?

[www.aka.ms/experimenteOMS](http://www.aka.ms/experimenteOMS)

# Agenda

## Virtualização e Alta Disponibilidade

Novos recursos e cluster Hyper-V

## Redes e Armazenamento Definidos por Software

Storage Spaces Direct e Storage Replica

## Nova plataforma de desenvolvimento e infraestrutura

Nano Server, Windows Containers e Hyper-V Containers

## Gerenciamento Moderno de infraestrutura híbrida

System Center + Operations Management Suite (OMS)

## A inteligência da nuvem provendo segurança em ambientes híbridos

OMS security

Q&A

# Datacenter definido por software

## Computação

---

Atualizações sem interrupção para tempo de inatividade zero.

Adicione/remova NICs/memória fixa quente.

Mais resistente a problemas de rede, armazenamento e computação.

## Rede

---

Controlador de rede para controle centralizado de políticas de rede.

Balancedor de carga integrado do Azure com hiperescala.

Firewall de datacenter distribuído com segurança aprimorada.

## Armazenamento

---

Hiperconvergente com Storage Spaces Direct.

Replicação síncrona nativa.

Qualidade de serviço em todo o cluster.

# Inovação da plataforma de aplicativos e infraestrutura

## Contêineres do Windows Server

---

Leve a agilidade e a densidade de contêineres para o ecossistema do Windows.

Contêineres seguros e manutenção flexível com contêineres do Hyper-V.

Gerencie com o Docker.

## Nano Server

---

SO Just Enough.

Ideal para infraestrutura inspirada em nuvem.

- Tamanho de imagem e superfície de ataque menores, menos reinicializações e patches.

Ideal para o desenvolvimento de aplicativos de última geração.

- Criado para contêineres e aplicativos nativos da nuvem.

# Gerenciamento

## System Center

---

Ferramenta de gerenciamento consolidada do mercado

Família completa de ferramentas de gerenciamento de um datacenter

## Operations Management Suite

---

Ferramenta de gerenciamento de um datacenter moderno

Inovação com tecnologias atuais de hiper armazenamento e performance

Traz inteligência e insights imediatos para seu negócio

# Windows Server 2012 / 2012 R2 Hyper-V

High performance live migration  
(compression/RDMA)

Zero downtime upgrades

Automatic VM Activation

Live VM export

Guest backup improvements

Enhanced VMConnect

Dynamic memory host balancing

First class Linux support – Dynamic memory, file  
system consistent host based backup

RemoteFX over WAN

Generation 2 Virtual Machines

Secure boot in a VM

User defined meta data for VHDX

PowerShell for all Hyper-V operations

Hyper-V Metrics

Shared nothing live migration

High performance auto tiered storage  
spaces

Write back cache with spaces

Storage QoS

Shared VHDX for guest clustering

VHDX online resize

Storage deduplication with live VMs for VDI

Hyper-V Recovery Manager (Microsoft Azure  
Site recovery)

Azure Backup

Inbox multi-tenant site-to-site VPN gateway  
for physical & virtual networks

Protected VM Networks/Virtual RSS

Enhanced LBFO performance with NIC  
teaming

Hyper-V Extensible Switch

4K Sector support

Hyper-V over SMB

Hyper-V over Spaces & ReFS

64 VP, 1 TB VMs

SR-IOV for 10+GB networking

64TB VHDX

Hyper-V Replica

Network Virtualization

USB redirection over RemoteFX vGPU

Hot add/remove of storage

VHDX resiliency

Dynamic & differencing VHDX performance  
improvements

384 LP, 4TB physical system

2+ Million IOPS to a single VM

Resource Pools

NUMA in a VM

1024 running VMs on a host

# Windows Server 2016 Hyper-V

High performance live migration (compression/RDMA)

Zero downtime upgrades

Automatic VM Activation

Live VM export

Guest backup improvements

Enhanced VMConnect

Dynamic memory host balancing

First class Linux support – Dynamic memory, file

system consistent host based backup

RemoteFX over WAN

Generation 2 Virtual Machines

Secure boot in a VM

User defined meta data for VHDX

PowerShell for all Hyper-V operations

Hyper-V Metrics

Shared nothing live migration

Shielded VM support

vTPM

Key Storage Drive for Gen 1 VM

Guest VSM (enable Device Guard &

Credential Guard in a VM)

VM Isolation

Linux Secure Boot

RemoteFX improvements

Discrete Device Assignment of GPU

Headless mode support

Distributed Storage QoS

REFS Block

REFS Fast Fixed Disk Creation

High performance auto tiered storage spaces

Write back cache with spaces

Storage QoS

Shared VHDX for guest clustering

VHDX online resize

Storage deduplication with live VMs for VDI

Hyper-V Recovery Manager (Microsoft Azure Site

recovery)

Azure Backup

Inbox multi-tenant site-to-site VPN gateway for

physical & virtual networks

Protected VM Networks/Virtual RSS

Enhanced LBFO performance with NIC teaming

Hyper-V Extensible Switch

4K Sector support

Nested virtualization

VMCX configuration file

Nano Server Host Support

Multi-host management (WMI)

Hypervisor Power Management

(connected standby works)

Virtual machine grouping

IC Upgrade via Windows Update

HvSocket (Guest-Host)

TimeSync improvements

240 VP, 16TB VMs

Support for Containers

Resilient Change Tracking (RCT)

Backup improvements

Backup of Shared VHDX

Hyper-V over SMB

Hyper-V over Spaces & ReFS

64 VP, 1 TB VMs

SR-IOV for 10+GB networking

64TB VHDX

Hyper-V Replica

Network Virtualization

USB redirection over RemoteFX vGPU

Hot add/remove of storage

VHDX resiliency

Dynamic & differencing VHDX performance

improvements

384 LP, 4TB physical system

2+ Million IOPS to a single VM

Resource Pools

NUMA in a VM

1024 running VMs on a host

VM configuration version & upgrade

Runtime Memory Resize

Hot / add remove of NICs

Production Checkpoints

Storage Resiliency - All Paths Down

Online Resize for Shared VHDX

Hot add / remove of replicated VHD

Rolling Cluster Upgrade

Cluster Compute Resiliency

Cluster Node Quarantine

Device Naming of NIC

512LP, 24TB Host

Direct Device Assignment

# Windows Server 2016 Virtualização

Alguns desafios que ele endereça

## Performance

RDMA e Redes convergentes  
Alta performance para live migration  
Virtual Machine Multi-Queue (VMMQ)

Node Fairness  
VM start ordering  
SMB Multi-channel and Multi-NIC

## Confiabilidade

Hot add e remove de memória de VM  
Hot add e remove VM de rede virtual  
Online storage resize ( agora para Guest Clustering com Shared VHDX)  
Production checkpoints

Cluster OS Rolling Upgrade  
Mixed OS Mode cluster  
VM resiliency  
Fault domain-aware clusters

## Flexibilidade

Storage QoS  
Broad Linux support  
Virtual machine compatibility mode  
VM services model (Integration Services via Windows Update)

Stretched clusters (Storage Replica)  
Workgroup and multi-domain cluster  
Cloud Witness  
Diagnostic improvements

# Gartner 2016: x86 Server Virtualization Infrastructure

# Performance

# Windows Server 2016 Hyper-V: Limites

Capacidade	Windows Server 2012/2012 R2 Standard ou Datacenter	Windows Server 2016 Standard ou Datacenter	VMware vSphere 6 Enterprise Plus
<b>Memória física suportada (Host)</b>	4 TB por servidor	<b>24 TB por servidor físico (aumento de 6x)</b>	6 TB por servidor físico (12 TB for specific OEM certified platform)
<b>Processadores lógicos suportados (Host)</b>	320	<b>512</b>	480
<b>Suporte a memória da máquina virtual</b>	1 TB por VM	<b>16 TB por VM (aumento de 16x)</b>	4TB por VM
<b>Suporte a processadores lógicos da máquina virtual</b>	64 por VM	<b>240 por VM (aumento de 3.75x)</b>	128 por VM

# Live migration com alta performance

Flexibilidade total no live migration de máquinas virtuais

**RÁPIDO**

Live migration por TCP/IP

**MAIS RÁPIDO**

Live migration com compactação

**INCRÍVELMENTE RÁPIDO**

Live migration por SMB (direto)

**Armazenamento**

Live migration

**Shared Nothing**

Live migration

# VM Load Balancing

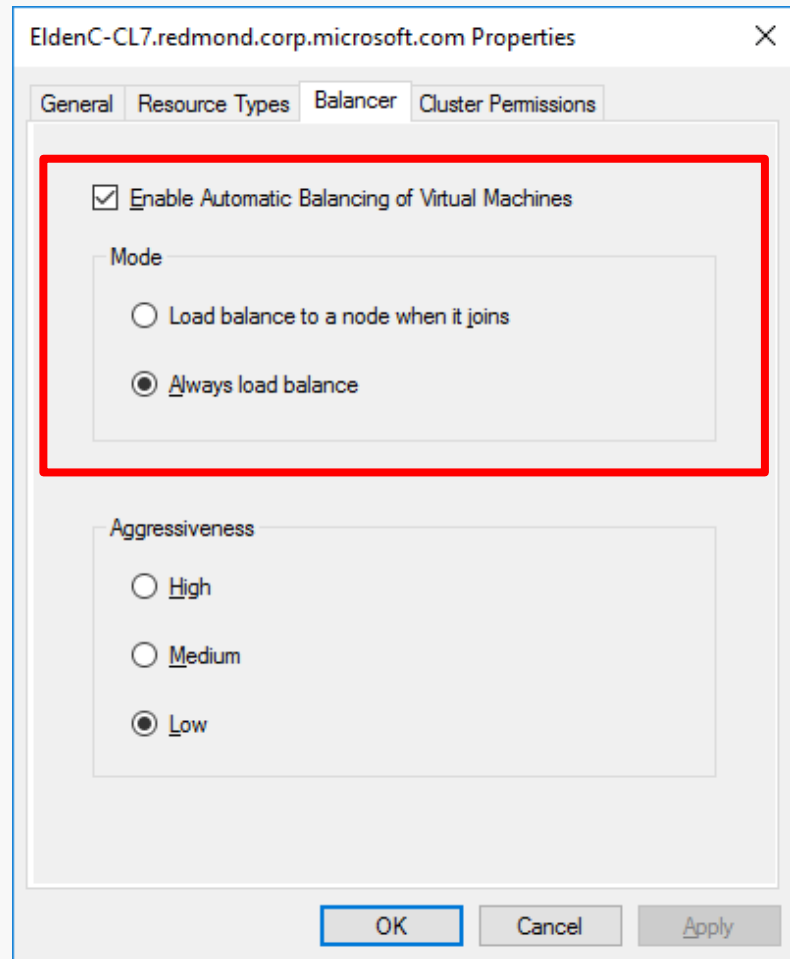

- Identifica os nós menos utilizados em um cluster e distribui as VMs entre eles
- Utilização determinada pela memória e CPU
- Nuvens privadas são balanceadas automaticamente
- Respeita políticas já existentes
  - Como Sites, anti-affinity, possible owners, paused nodes

Balanceamento para o Cluster

# VM Fairness: Configurando

## GUI

## PowerShell

- Cluster common property 'AutoBalancerMode'

Value	Behavior
0	Disabled
1	Load balance on node Join
2	Load balance on node Join and every 30 minutes (default)

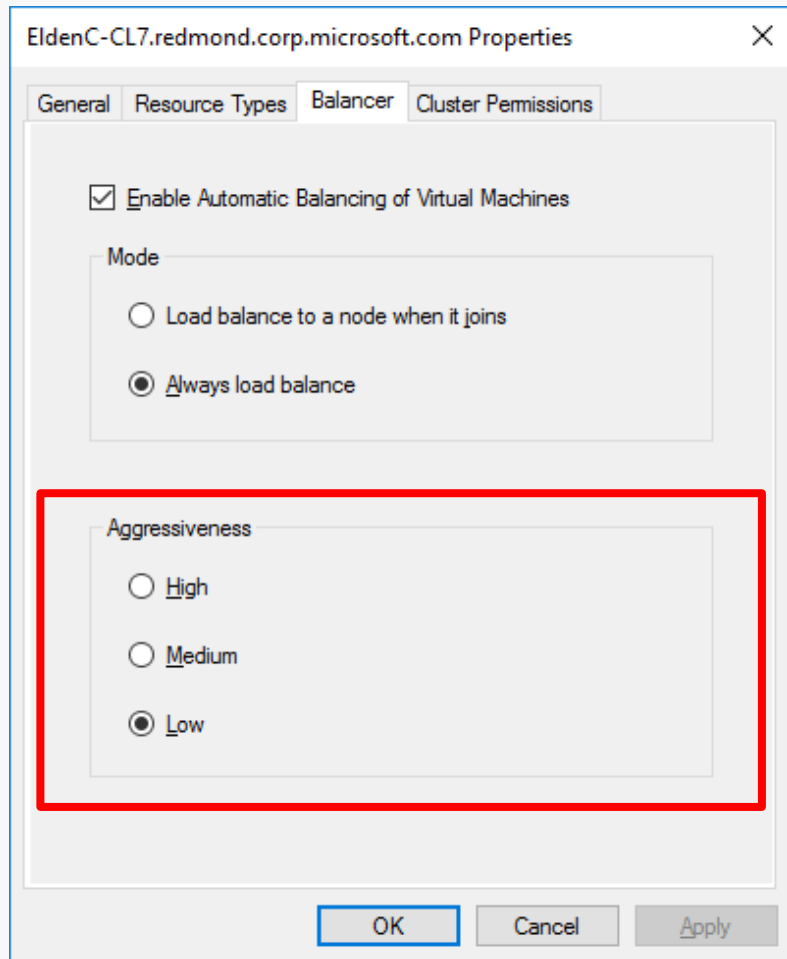

PowerShell:

```
(Get-Cluster).AutoBalancerMode = 2
```

# VM Fairness: Agressividade

## GUI

## PowerShell

- Controlada pela propriedade do cluster 'AutoBalancerLevel'

Valor	Agressividade	Comportamento
3	Alta	Balanceamento quando o host está 5% acima da média
2	Média	Balanceamento quando o host está a 70% carregado
1	Baixa (Default)	Balanceamento quando o host está a 80% carregado

## PowerShell:

```
(Get-Cluster).AutoBalancerLevel = 3
```

Confiabilidade

# Aumente a confiabilidade com Hyper-V

Hot add e remove de disco, memória e rede

Realize manutenção nas máquinas virtuais sem impactar workloads rodando dentro dela.

Online storage resize  
(Guest clustering with Shared VHDX)

Gest Clusters com melhorias de disponibilidade incluindo redimensionamento on-line, backups em nível de de host e suporte para Hyper-V Replica.

Production checkpoints

Criar facilmente e em qualquer momento, imagens de uma VM, que podem ser restauradas posteriormente para todas os workloads em produção.

# Checkpoint de produção

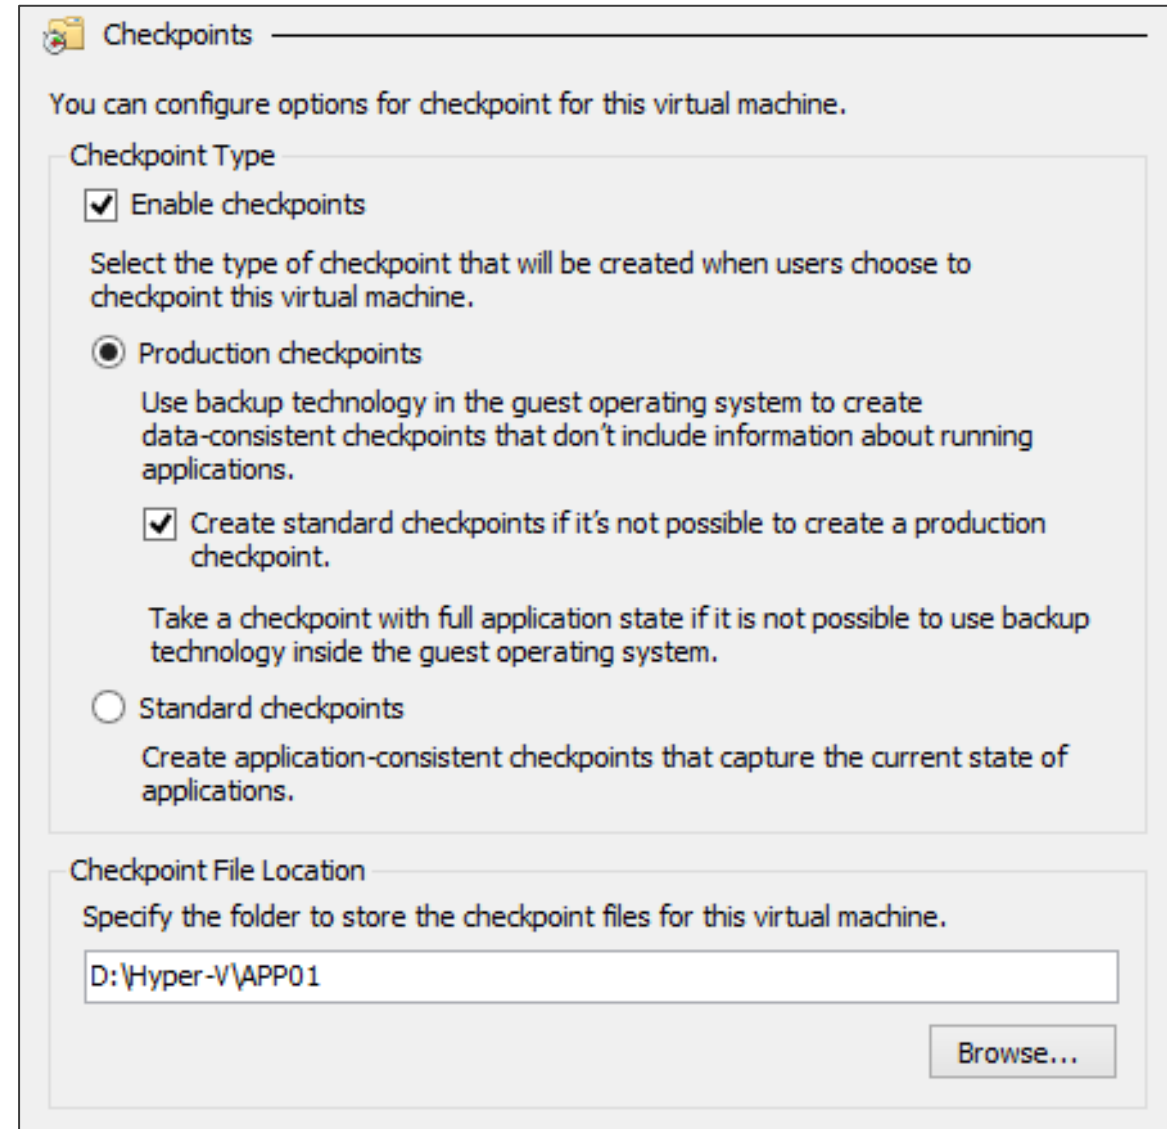

**Suporte total para workloads chave:** Crie facilmente imagens de “pontos no tempo” de máquinas virtuais, que podem ser restaurados posteriormente de um modo totalmente suportado em produção

**VSS:** Volume Snapshot Service (VSS) é agora usado de dentro da máquina virtual para criar o creckpoint de produção, ao invés da tecnologia save state

**Interface Familiar:** Mesma interface do tradicional checkpoint

**Linux:** VMs Linux executam um flush do buffer do sistema para criar o checkpoint de produção consistente com o sistema de arquivos

**Produção como default:** Novas máquinas virtuais usarão o checkpoint de produção como default

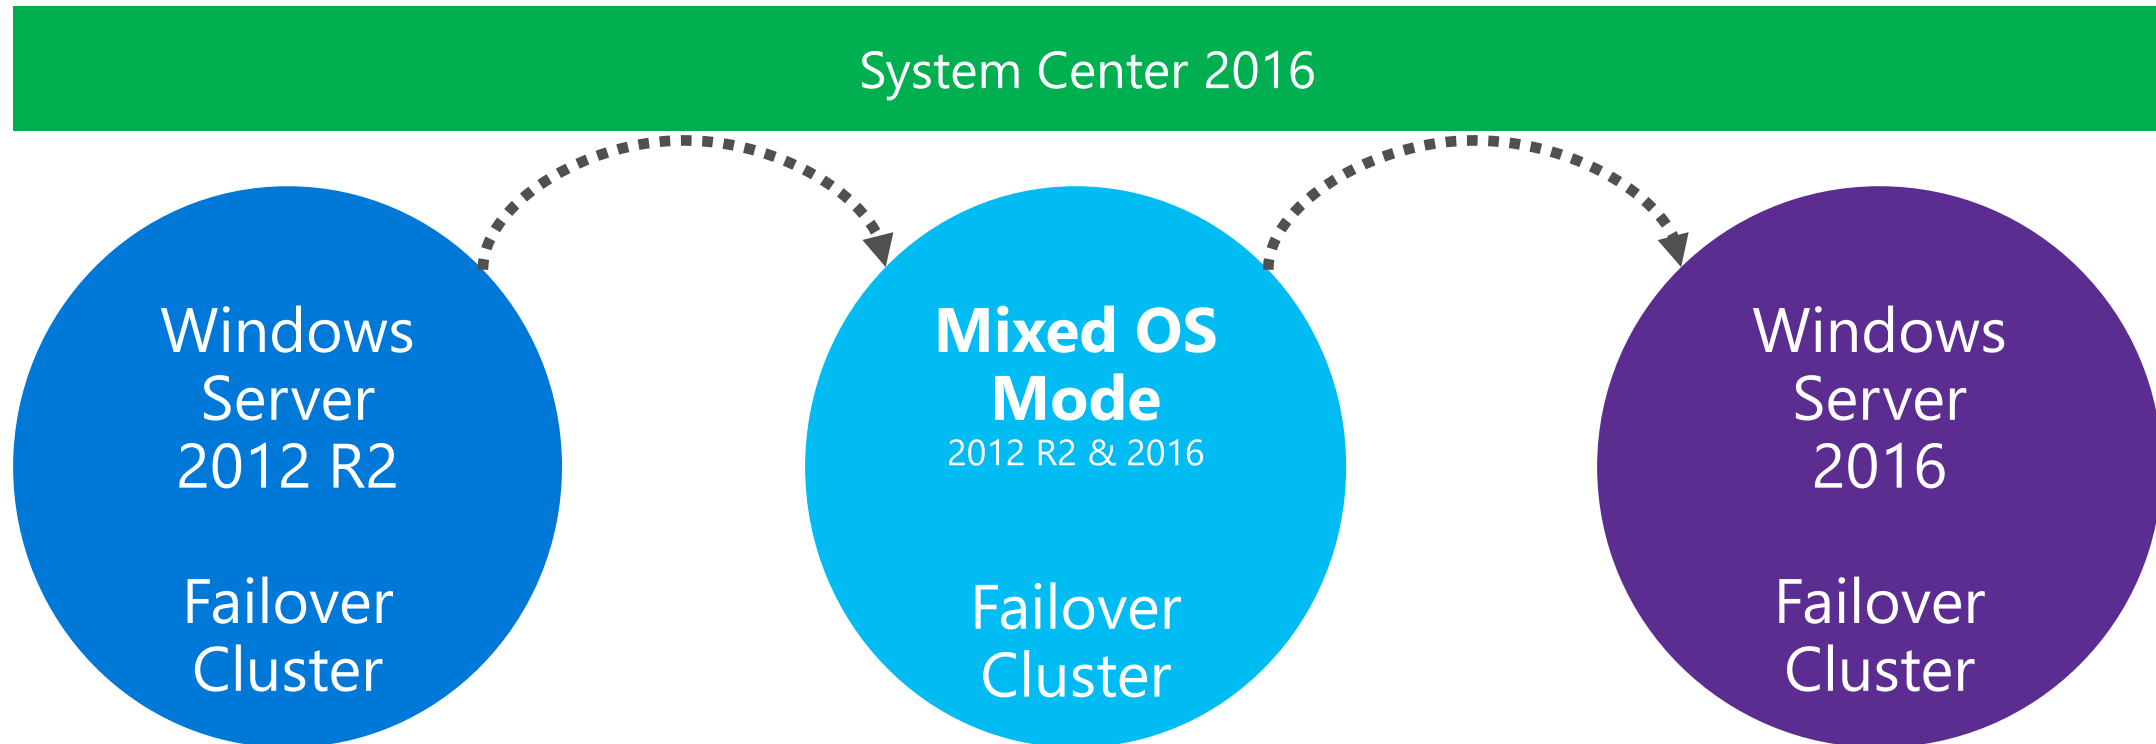

# Cluster OS Rolling Upgrade

## Failover Cluster com "Mixed OS mode"

Novas funcionalidades não ficam disponíveis

Não rode o cluter em "Mixed Mode" por mais de 1 mês.

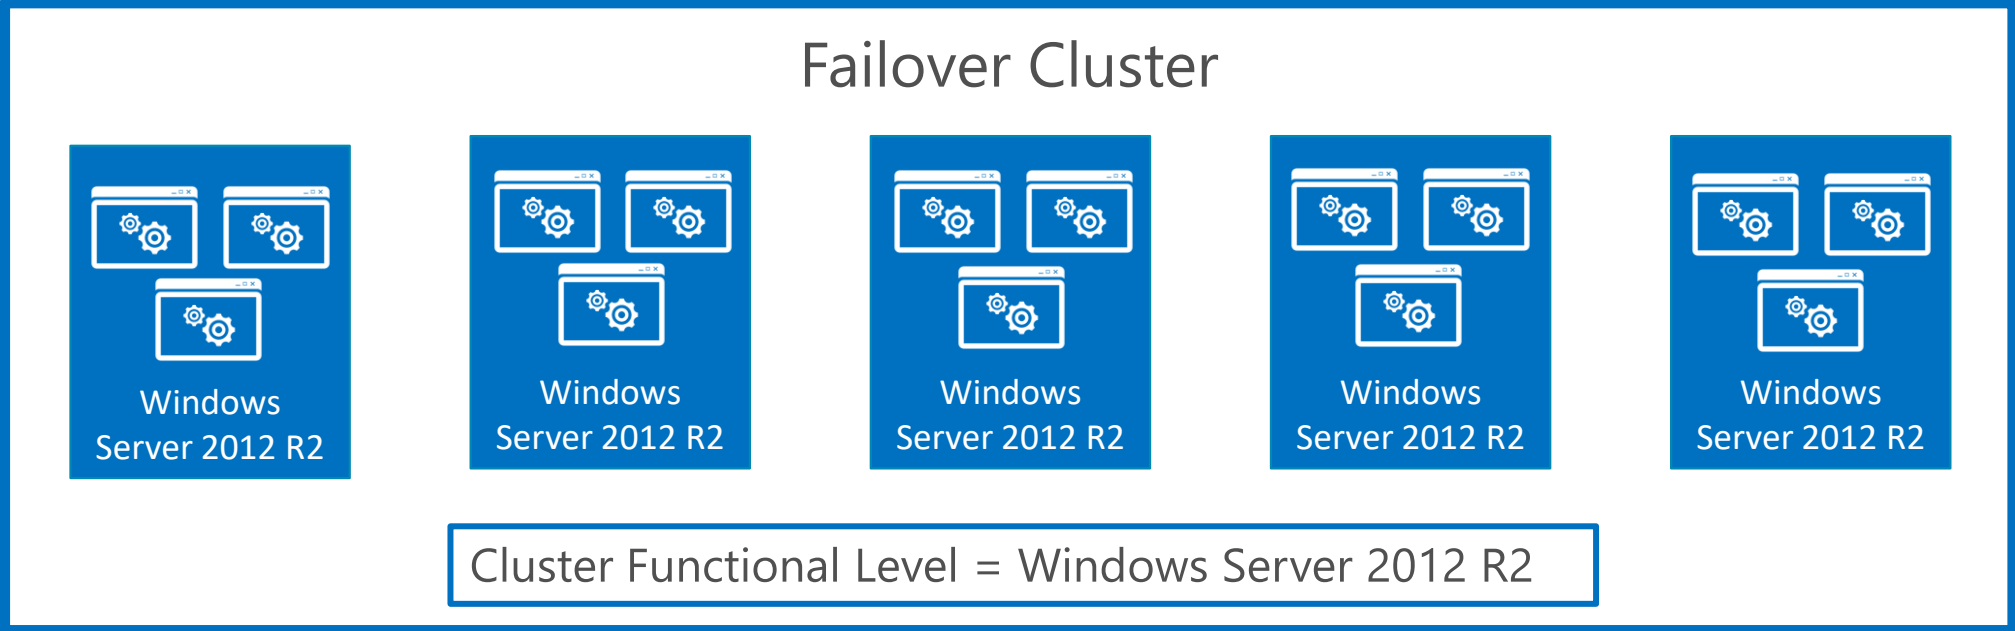

Funciona com o conceito de Cluster Functional Level

# Cluster OS Rolling Upgrade: Processo

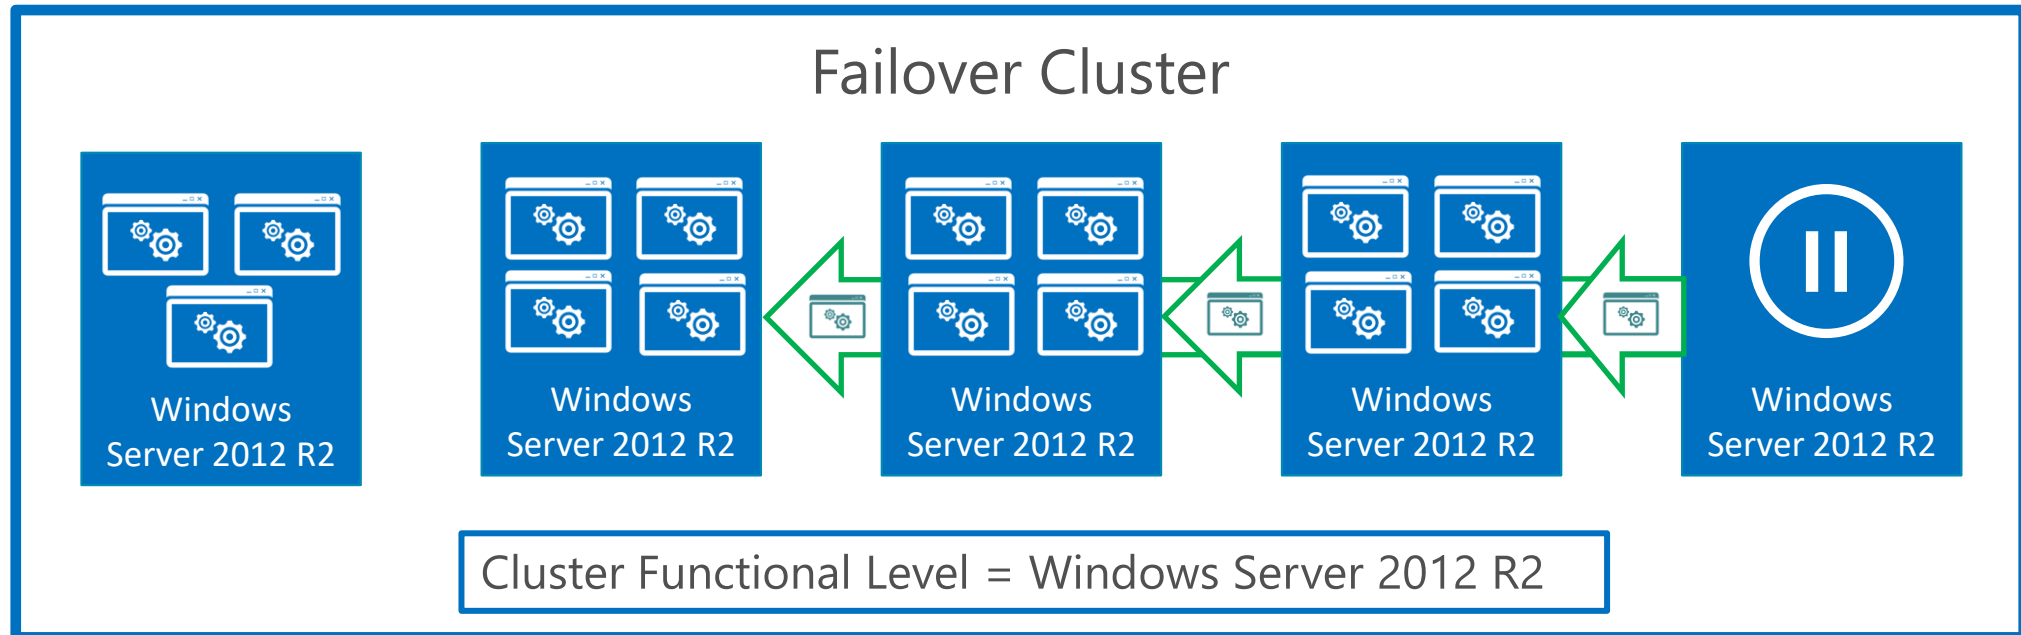

## Cluster Windows Server 2012 R2

# Cluster OS Rolling Upgrade: Processo

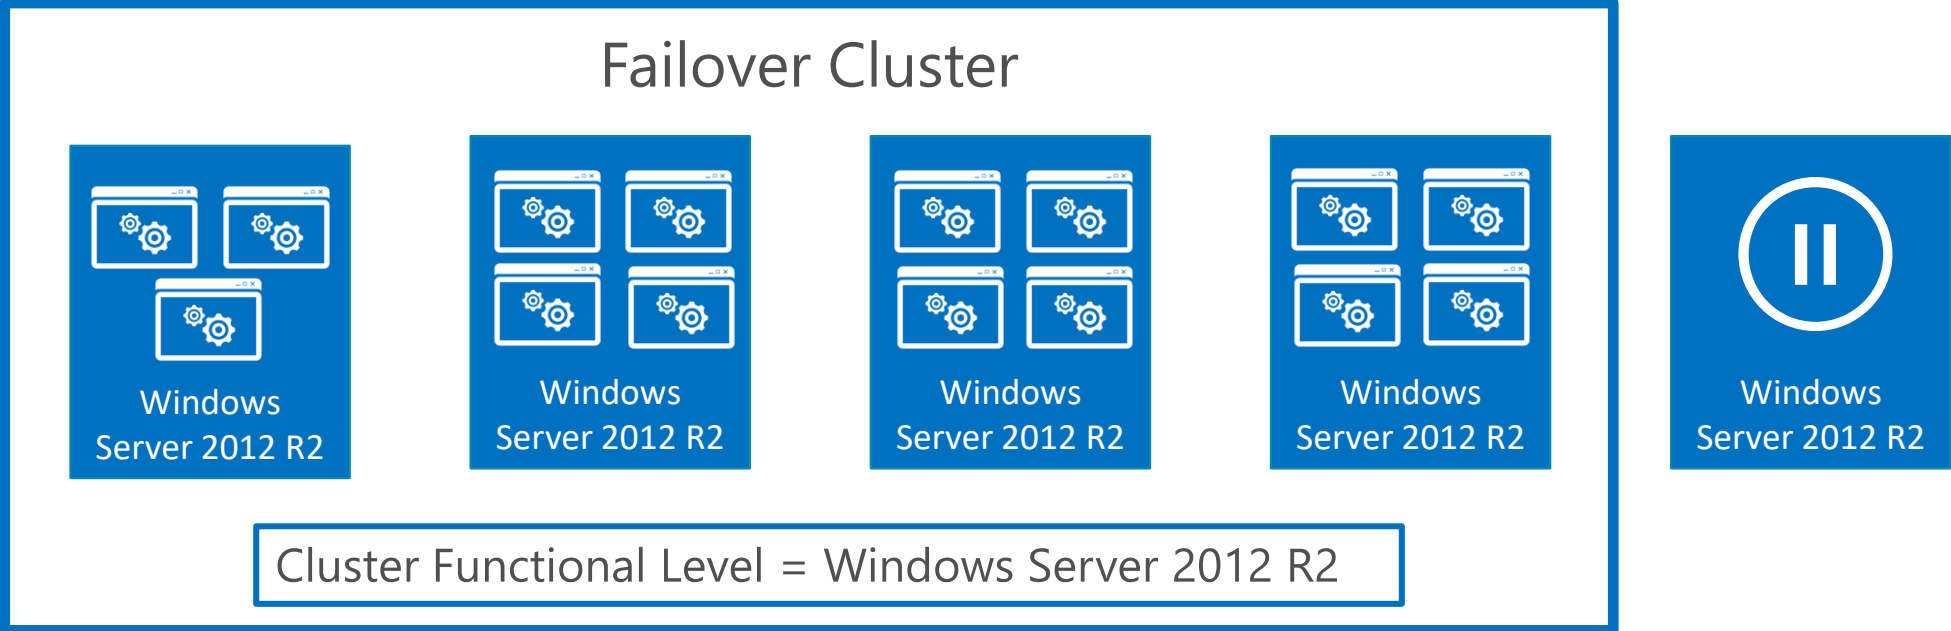

Migração de workloads para fora do nó

Pause | Drain

# Cluster OS Rolling Upgrade: Processo

Evict Idle no nó do cluster

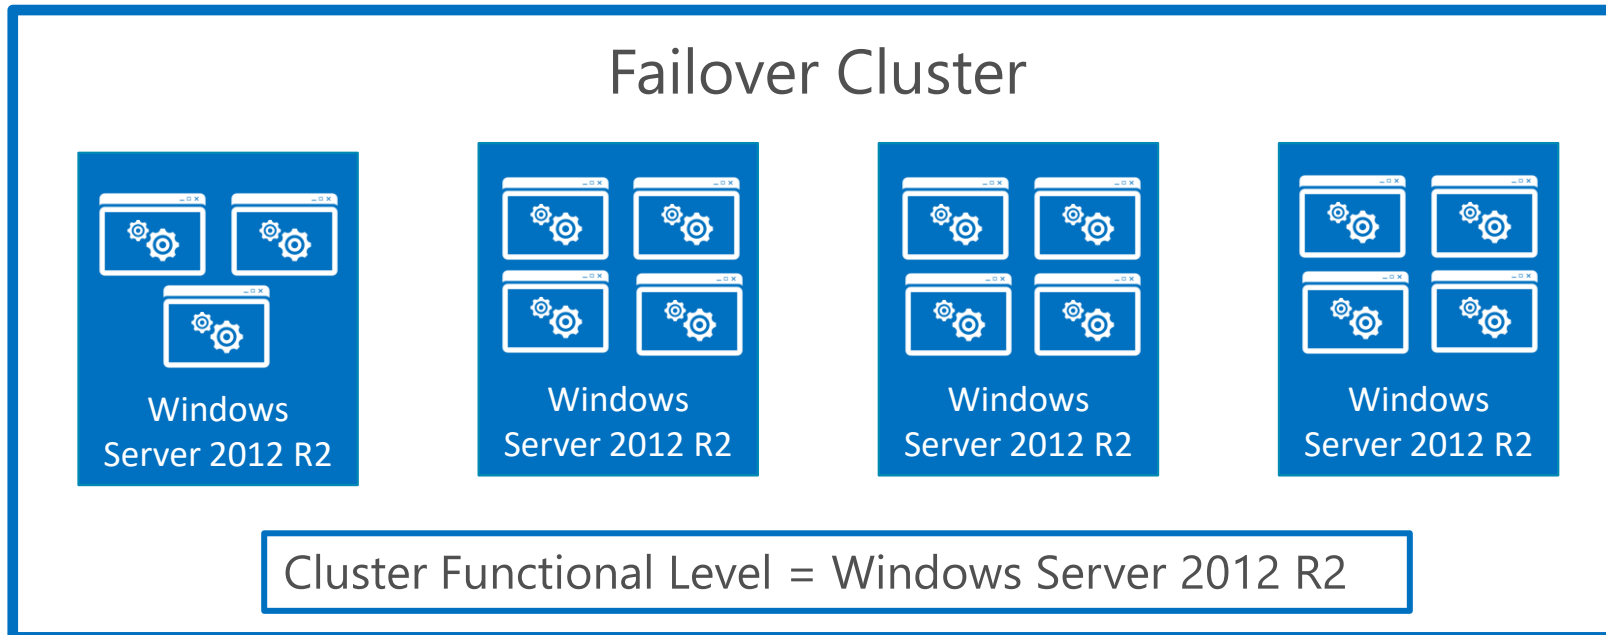

# Cluster OS Rolling Upgrade: Processo

## Atualização do nó

Instalação do novo OS

Instalação e configuração de quaisquer requisitos dos workloads

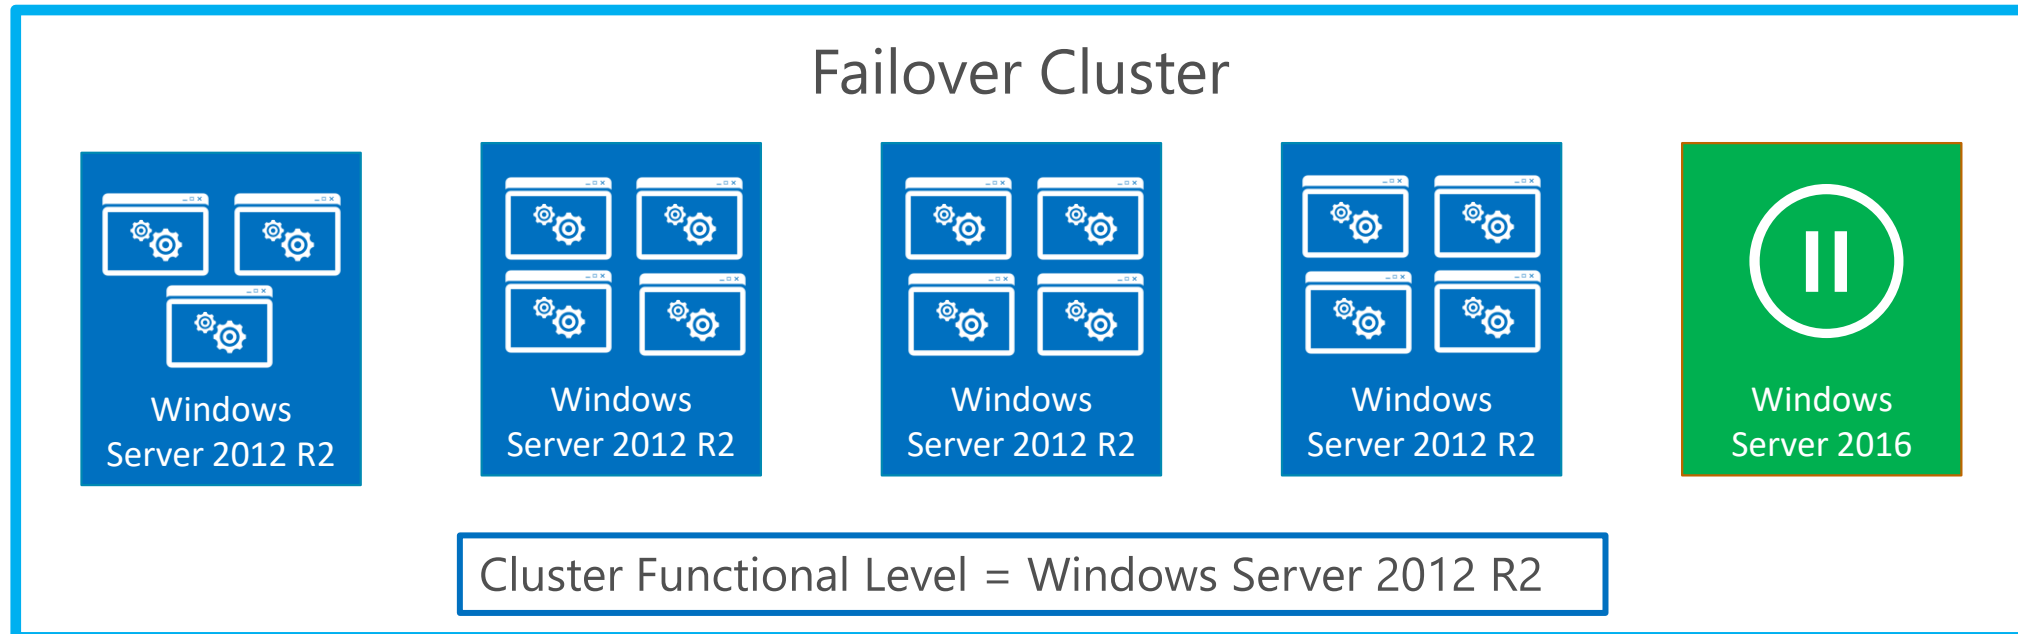

# Cluster OS Rolling Upgrade: Processo

## Readicionar o nó no cluster

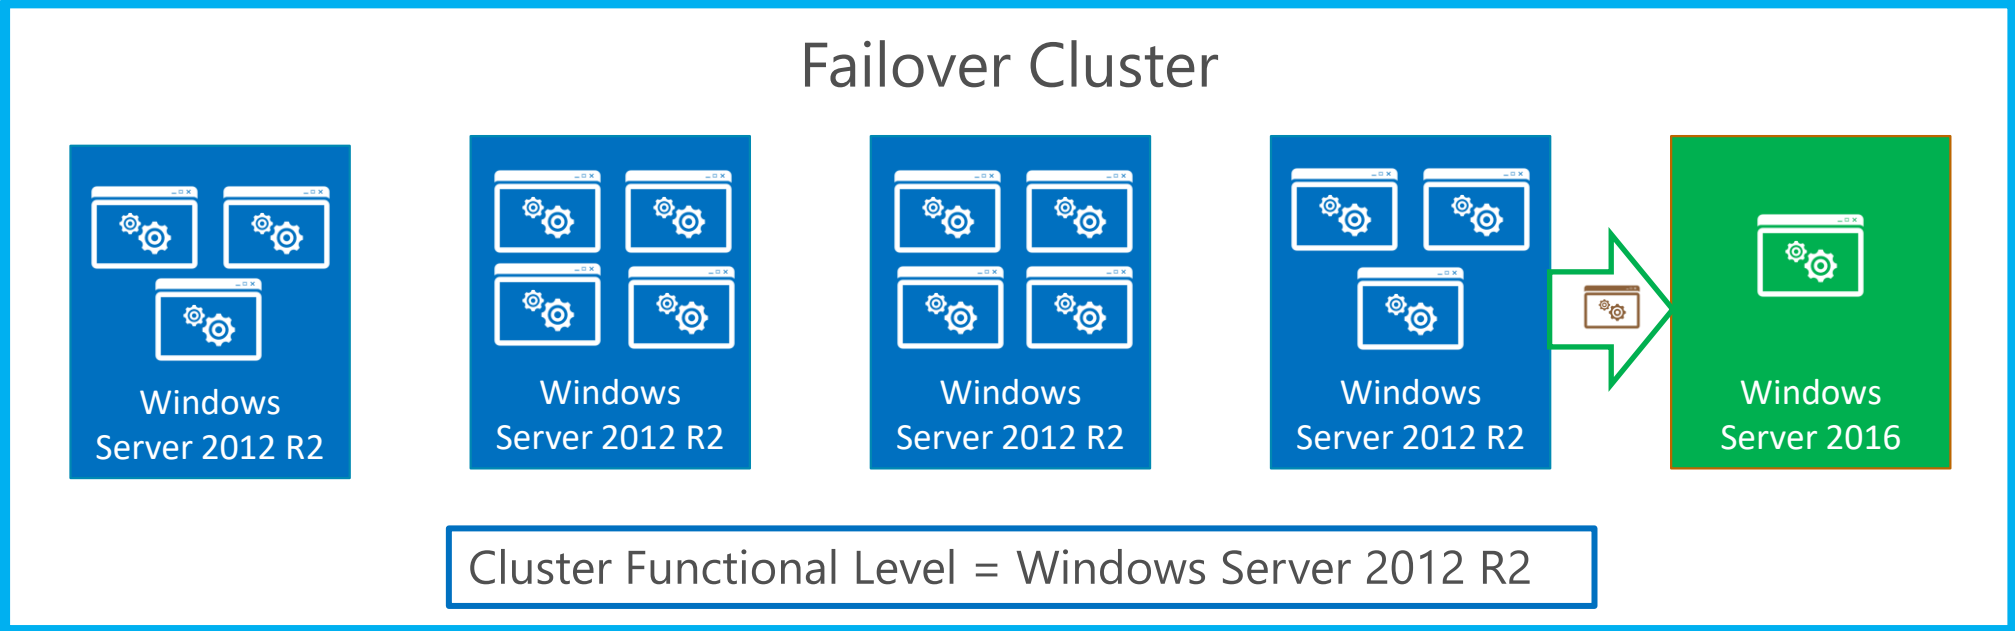

Usando UI ou PowerShell

Note que o Cluster Functional Level permanece como Windows Server 2012 R2.

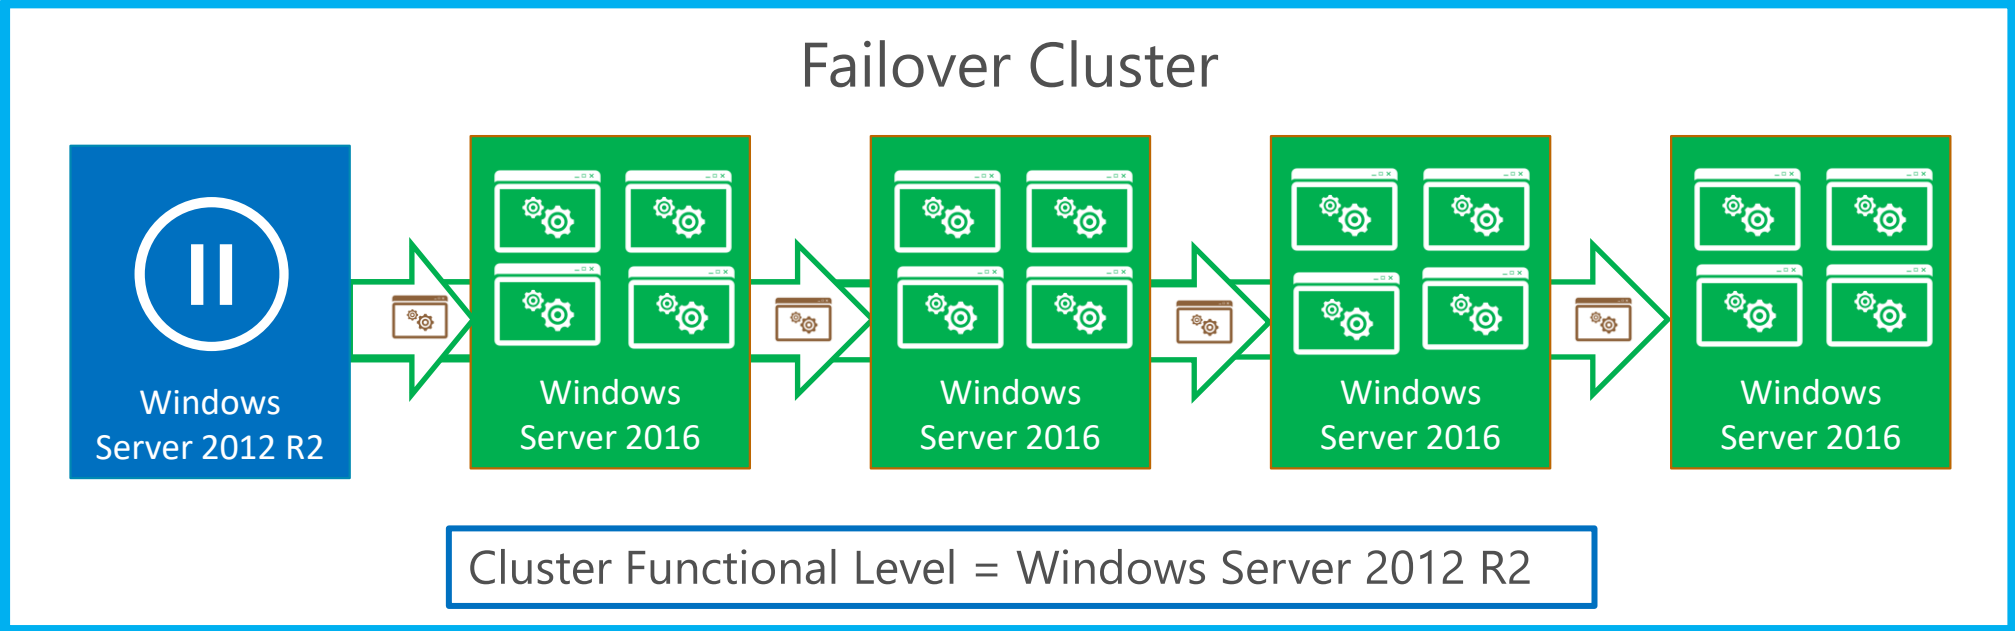

# Cluster OS Rolling Upgrade: Processo

## Rebalanceamento de carga

# Cluster OS Rolling Upgrade: Processo

Repete-se o processo para os outros nós

# Cluster OS Rolling Upgrade: Processo

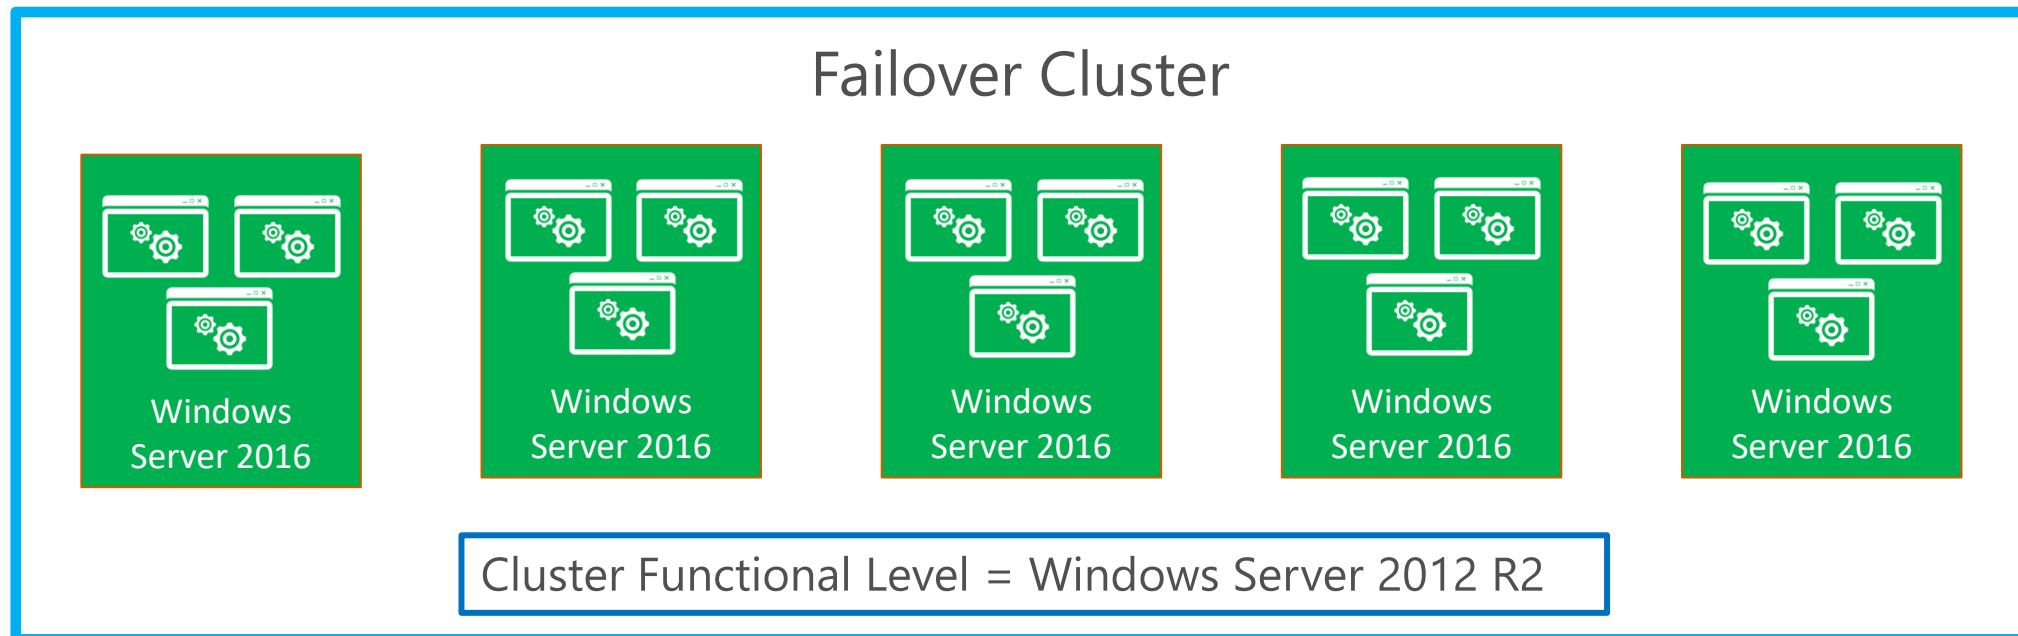

## Pronto para upgrade

Note que neste momento:

O Cluster Functional Level é ainda 2012 R2.

As funcionalidades são limitadas às do Windows Server 2012 R2.

É ainda possível adicionar um nó com Windows Server 2012 R2.

# Cluster OS Rolling Upgrade: Processo

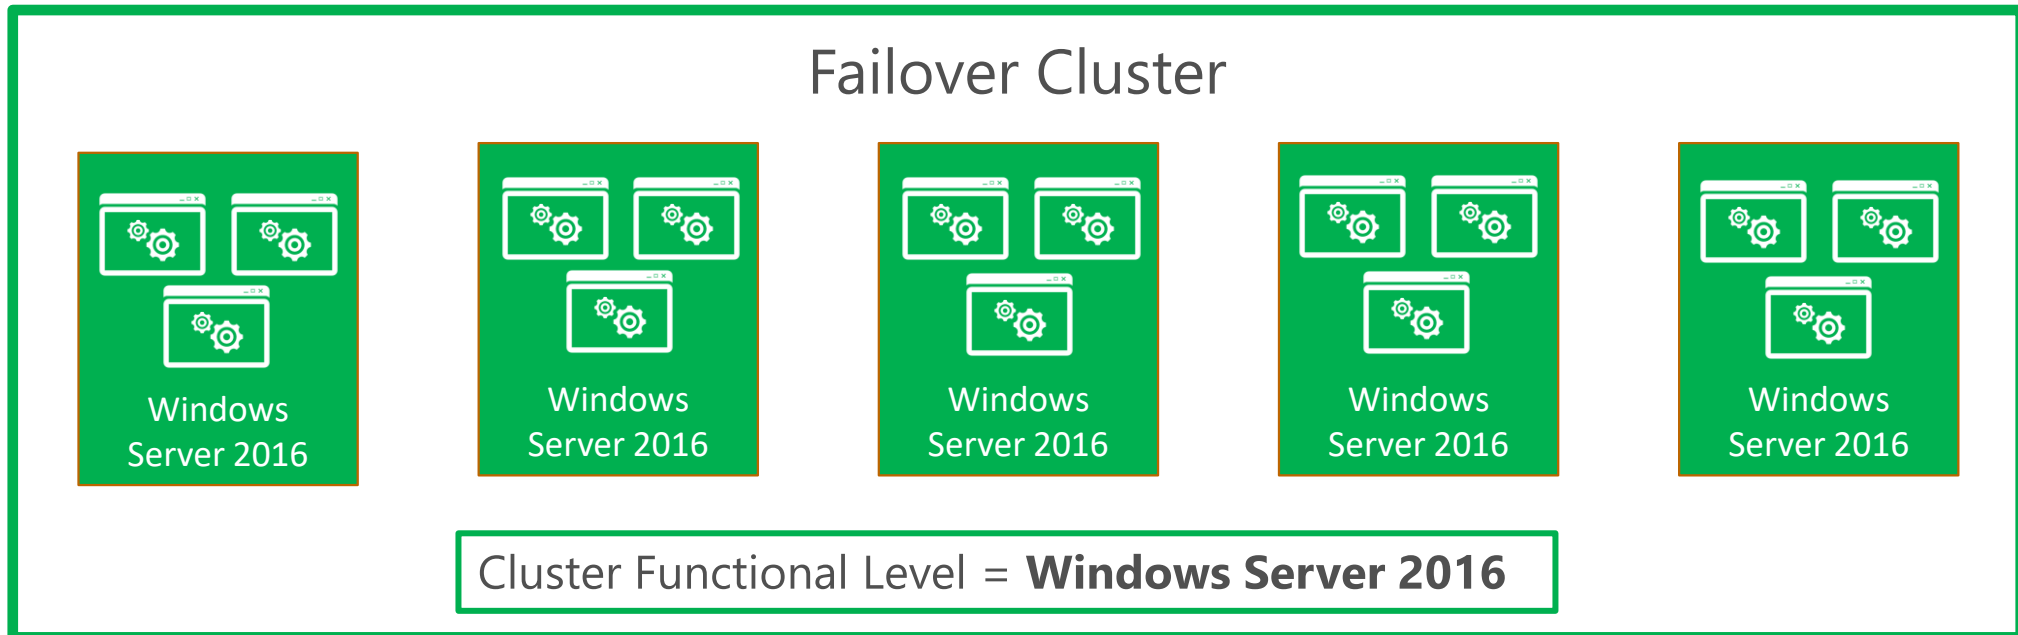

## Upgrade do Functional Level para 2016

`Update-ClusterFunctionalLevel` cmdlet

Agora:

As funcionalidades do 2016 estão habilitadas.

Não é mais possível adicionar um nó com Windows Server 2012 R2.

# Cluster OS Rolling Upgrade: Processo

## Fim do Upgrade

# Resiliência de VM: Computação

Flexibilidade

Desenhando para escalabilidade de nuvem com hardware commodity

Configurável, baseado no seu SLA

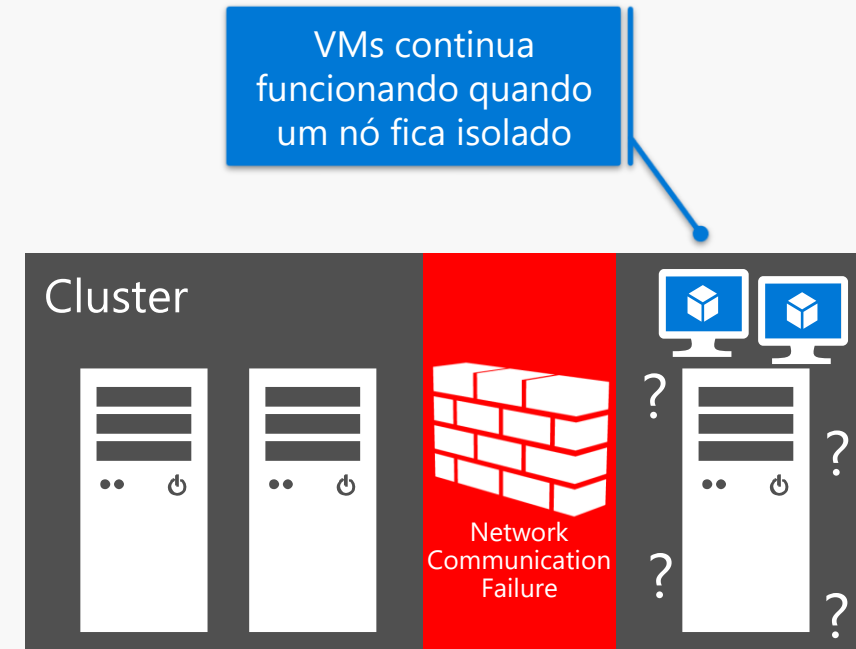

Disponibilidade

VM continuam funcionando mesmo quando um nó é isolado do cluster

Confiabilidade

Resiliência para falhas transientes

# Resiliência de VM: Storage

Resiliência

Desenhando para escalabilidade de nuvem com hardware commodity

Preserva a sessão da VM em um evento transiente de interrupção da storage

Visibilidade

VM é notificada rapidamente da falha

Resposta rápida da VM evita problemas com blocos ou arquivos baseados na infraestrutura de storage

Confiabilidade

VM é movida para estado PausedCritical e esperará a storage se recuperar

# Quarentena para os “Flapping Nodes”

Proteção

Nós não saudáveis são colocados em quarentena, não permitindo o ingresso no cluster

Previne problemas dos outros nós e do cluster em si

Resiliência

Um nó é colocado em quarentena depois de 3 problemas transientes que resultou no isolamento dentro de 1 hora

Controle

Máximo de 25% dos nós podem entrar em quarentena  
Nós não podem ingressar no cluster por 2 horas

Cluster

Em quarentena

Administrator: Windows PowerShell

```
Cluster Resiliency
VM Compute Resiliency Demo, press [ENTER] to begin: _
```

Flexibilidade

# O melhor suporte a Linux com Hyper-V

**Suporte Amplo:** Execute Red Hat, SUSE, OpenSUSE, CentOS, Ubuntu, Debian e Oracle Linux com suporte total.

**Aumente a utilização:** Execute *Windows* e *Linux* lado a lado, aumentando a utilização e reduzindo custos com *hardware*.

**Networking melhorado:** Os maiores níveis de performance de *networking* em *Linux guests* com suporte a virtual *Receive Side Scaling* (vRSS).

**Melhorias no armazenamento:** *Hot-add* e *online-resize* de armazenamento para uma melhor e mais flexível administração.

**Proteção garantida:** Melhor do que suporte ao backup físico, suporte ao backup para virtualizações *Linux Guest* no *Hyper-V*.

**Gerenciamento Simplificado:** Experiência única para gerenciamento, monitoração e operações de infraestrutura.

**PowerShell support:** Use a configuração *PowerShell Desired State* para especificar declarativamente a configuração dos seus servidores *Linux*.

# Novos cenários de cluster

## Stretched clusters (Storage Replica)

*Hardware-agnostic, sincronia e replicação block-level, de fábrica.*

## Workgroup & multi-domain cluster

Crie cluster de Failover sem domínios ou dependências, incluindo nós que são membros de servidores/workgroups (que não estão em nenhum domínio) ou membros de diferentes domínios.

## Cloud Witness

Aproveite o poder da Microsoft Azure Blob Storage para aumentar a resiliência da solução, sem sites adicionais.

## Diagnostic improvements

Coletar e analisar dados para o diagnóstico é o primeiro passo para a solução de problemas e Windows Server 2016 vem com melhorias que tornam esse processo mais fácil e rápido.

# Stretched clusters (Storage Replica)

**Replicação sincronizada:** Armazenamento agnóstico e espelhado de dados em locais físicos com volumes consistente com travamento garantindo nenhuma perda de dados no nível de volume.

**Maior resiliência:** Desbloqueie novos cenários para *metro-distance clusters*, cluster de recuperação de desastres e *stretch failover clusters* para alta disponibilidade automatizada.

**Flexibilidade:** Servidor a servidor, cluster a cluster e cluster estendido. Discos locais, Storage Spaces Direct, discos com cluster. NTFS, REFS, CSVFS. TCP, RDMA. Síncronos ou a Assíncrono.

**Streamlined management:** Gerenciamento gráfico para cada nó individuais e clusters através do Cluster Manager e Azure Site Recovery. Suporte total a PowerShell e SMAPI.

# Multi-site clustering

## Cluster failover automático entre sites

### Multi-site cluster

Cluster único, espalhado entre múltiplos sites, conectado por infraestrutura e redes de alta velocidade.

### Workload e Storage agnostic

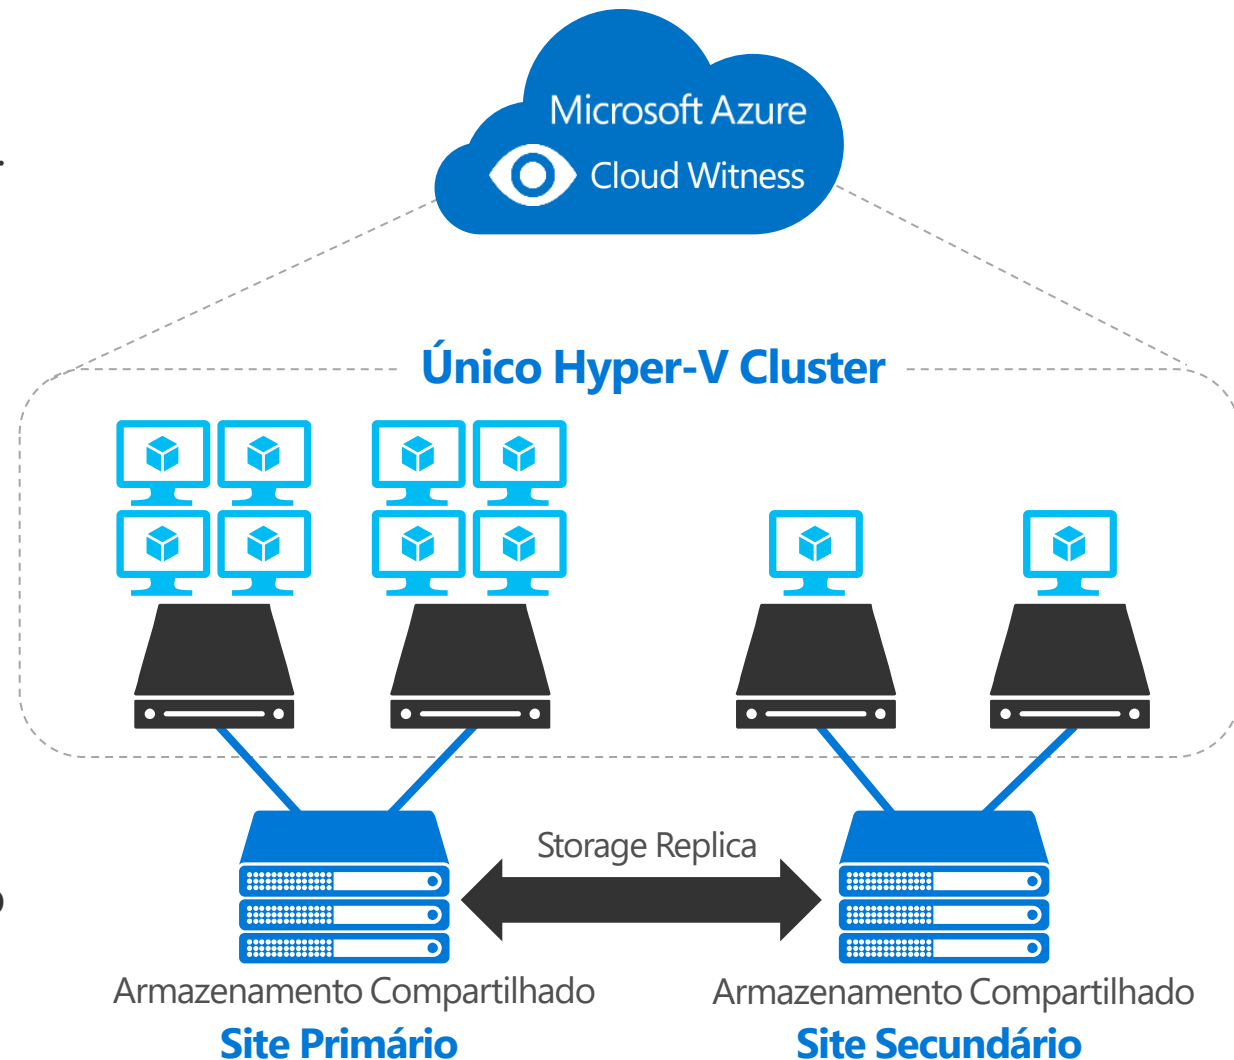

Utiliza armazenamento com replicação no volume-level entre armazenamentos de qualquer tipo. Executa workloads agnósticos.

### Cloud Witness

Aproveite o poder da Microsoft Azure para aumentar a resiliência da solução, sem sites adicionais. Utilizando o Azure Blob Storage como um ponto de arbitragem para ajudar a atingir o quorum caso um site falhe.

### Automated

Com replicação síncrona, no caso de uma interrupção local, um cluster multi-site pode providenciar automático *failover*, para objetos com baixo tempo de recuperação, sem perda de dados no nível do sistema de arquivos.

# Redes e Armazenamento Definidos por Software

Speaker  
cargos

Microsoft

# Rede Definida por Software (SDN)

Speaker

Cargo

Microsoft

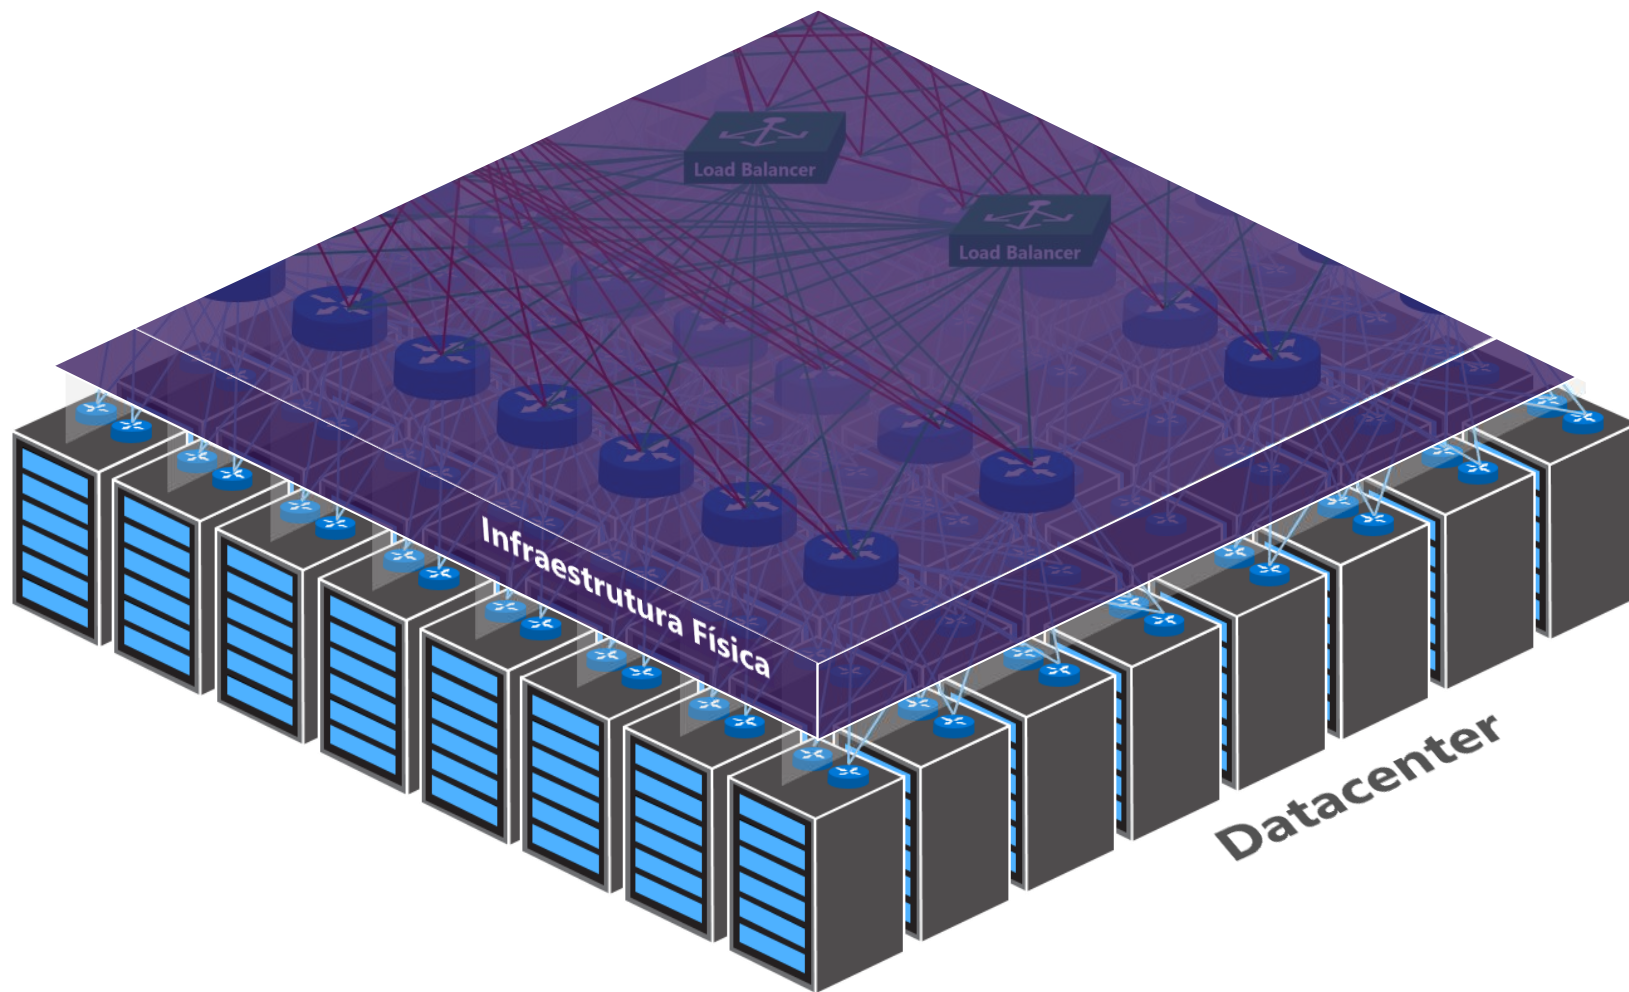

Edge Routers

Fixed-Function  
Physical Appliances

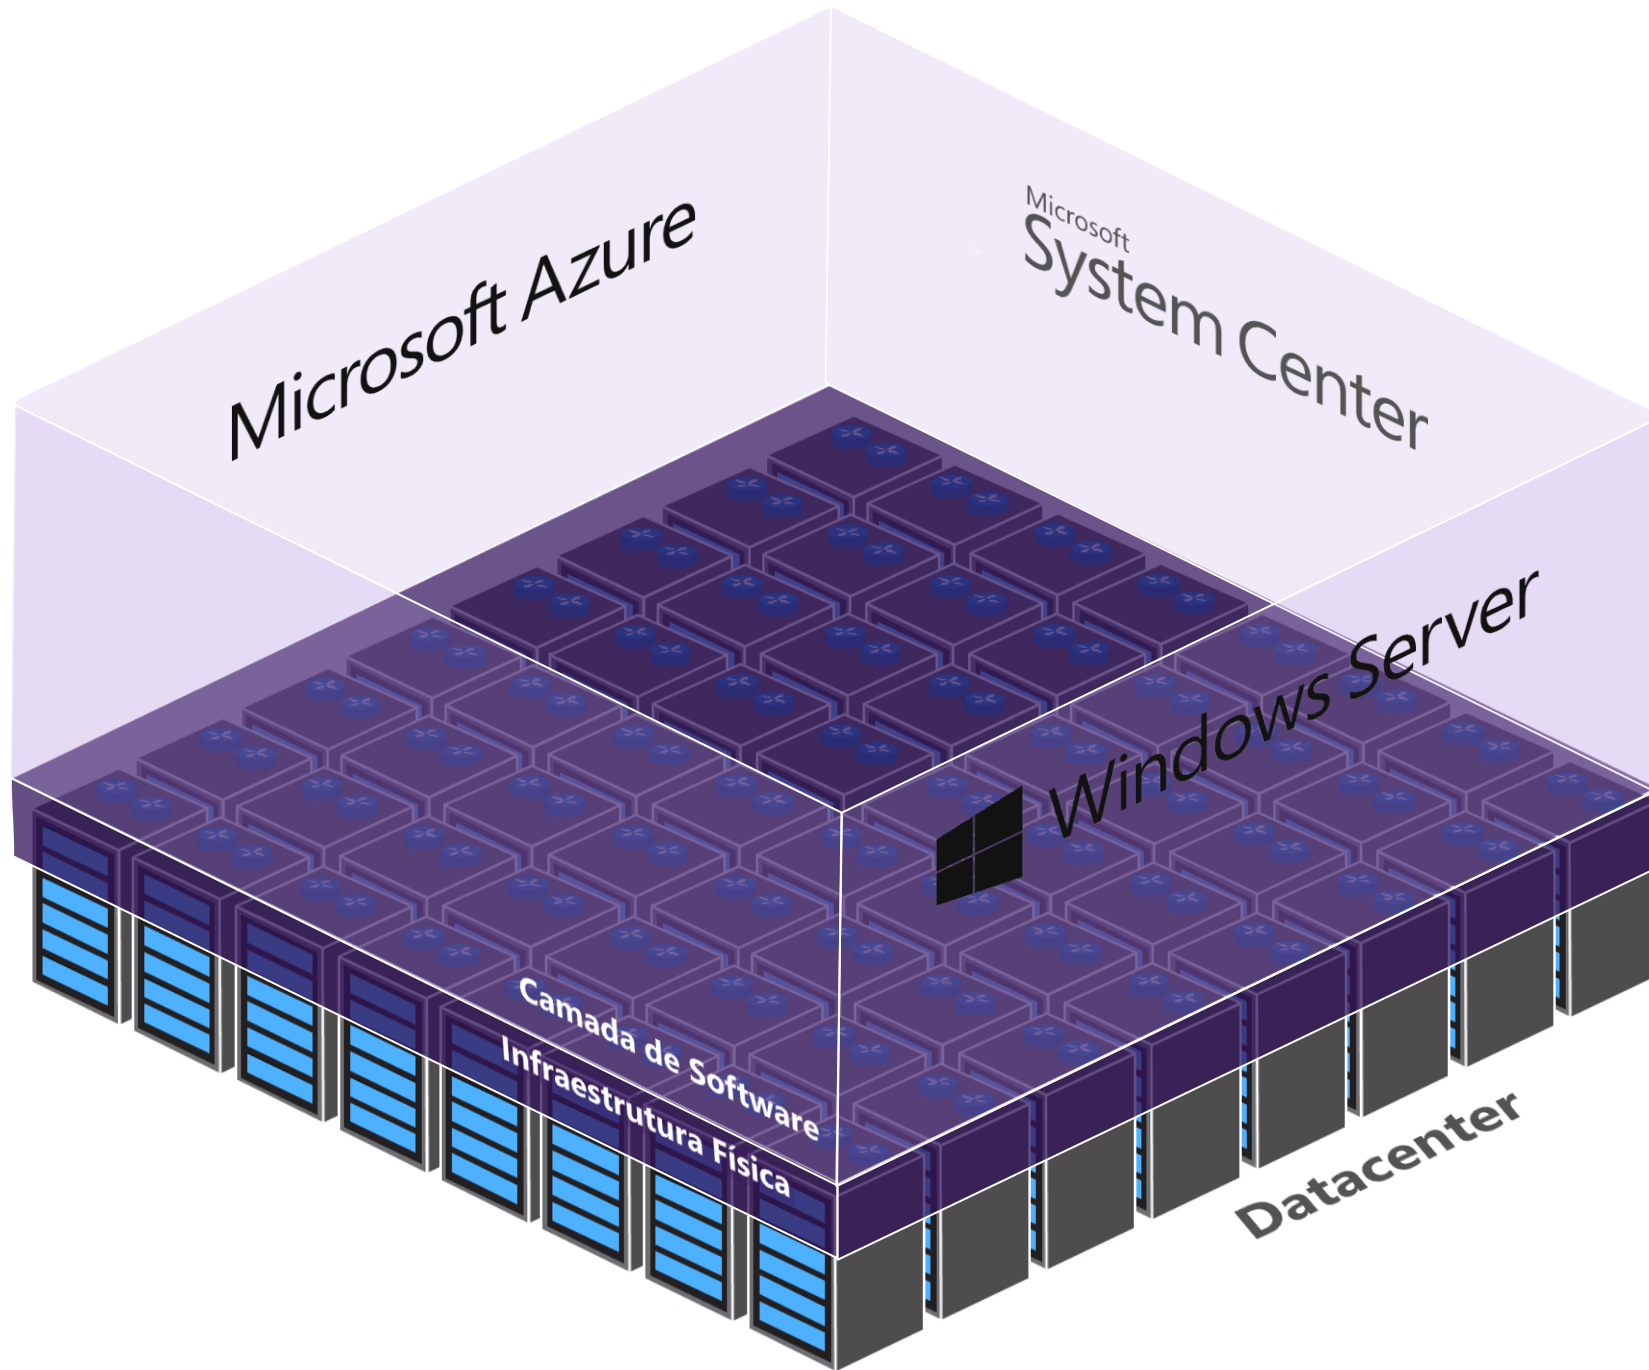

Spine Switches/Routers

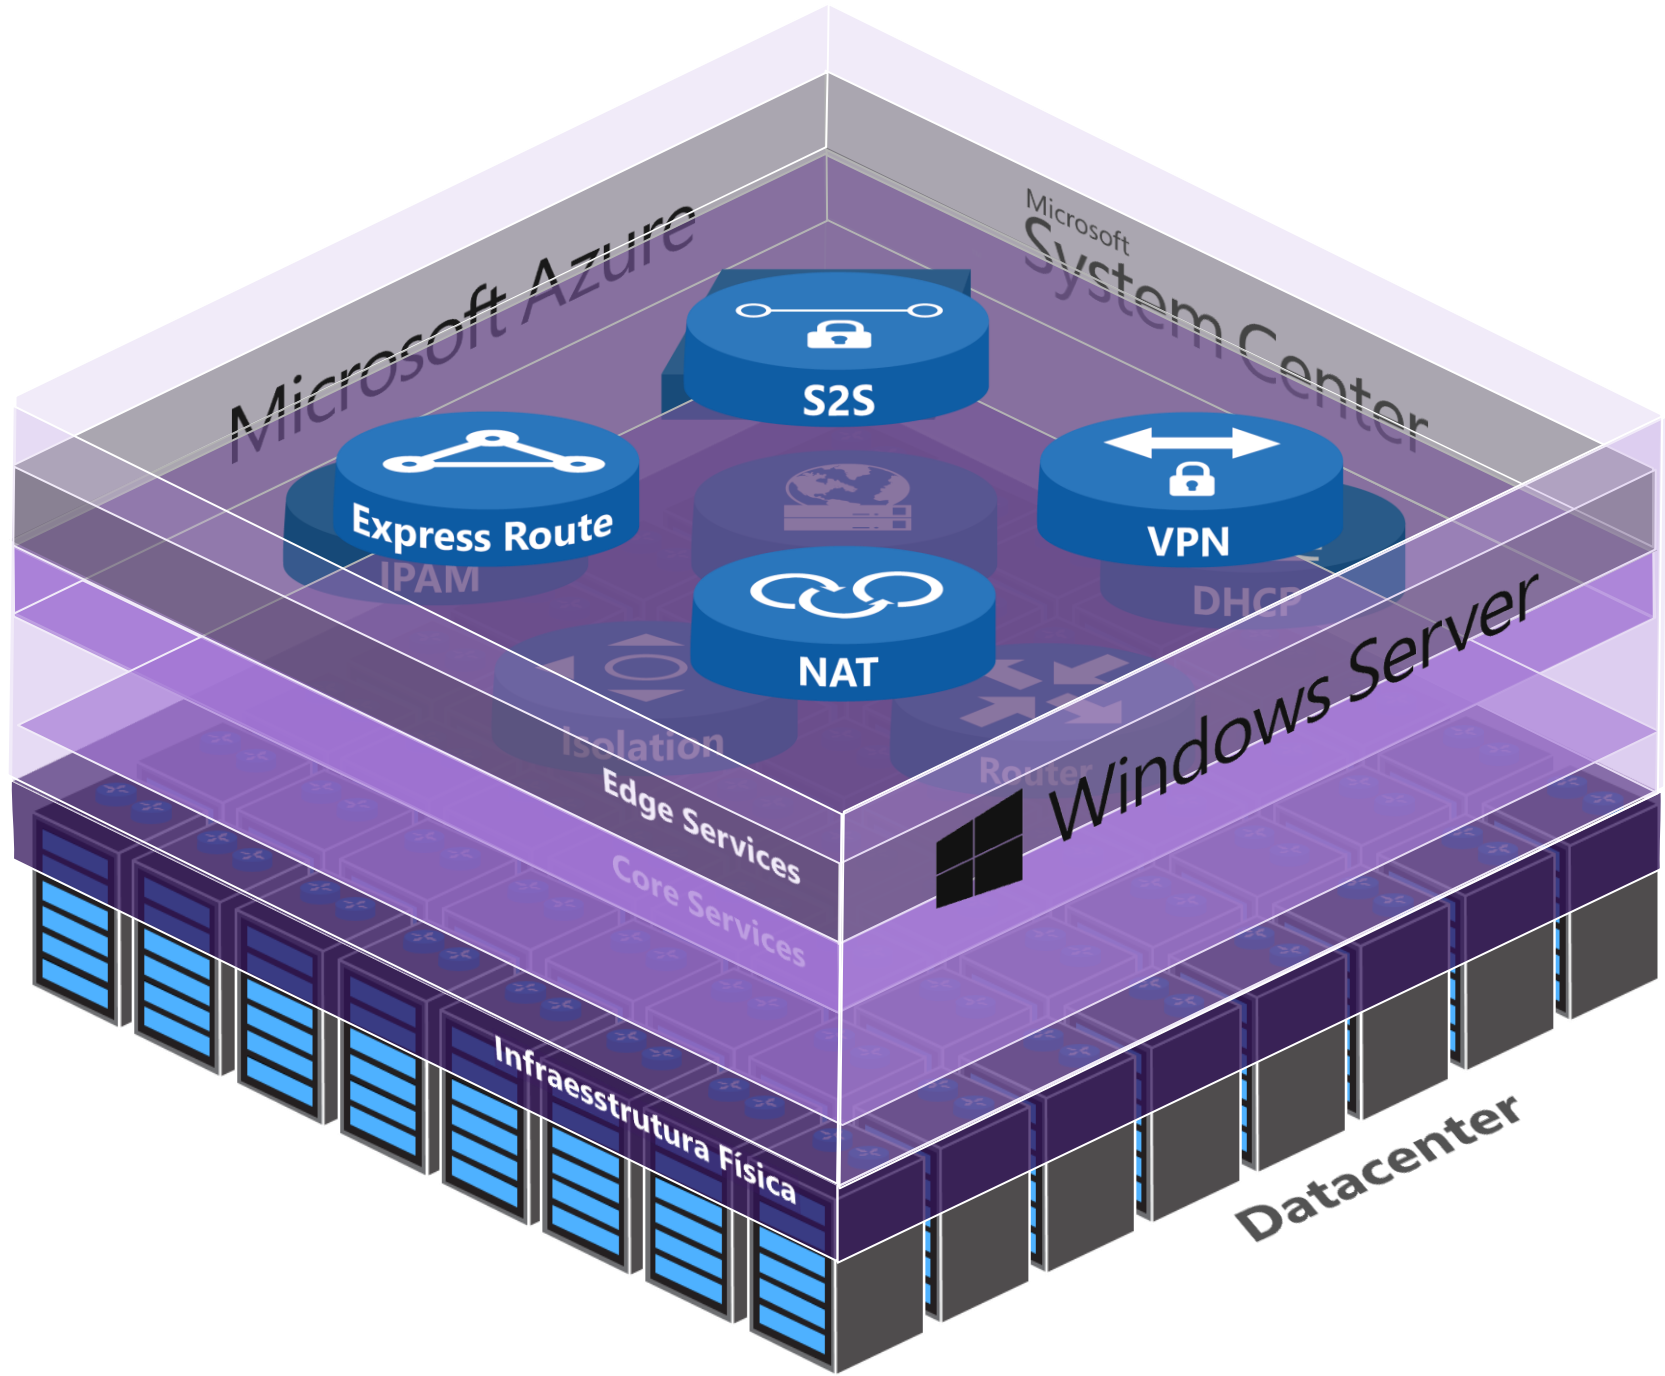

Compute/Storage  
& TOR Switches

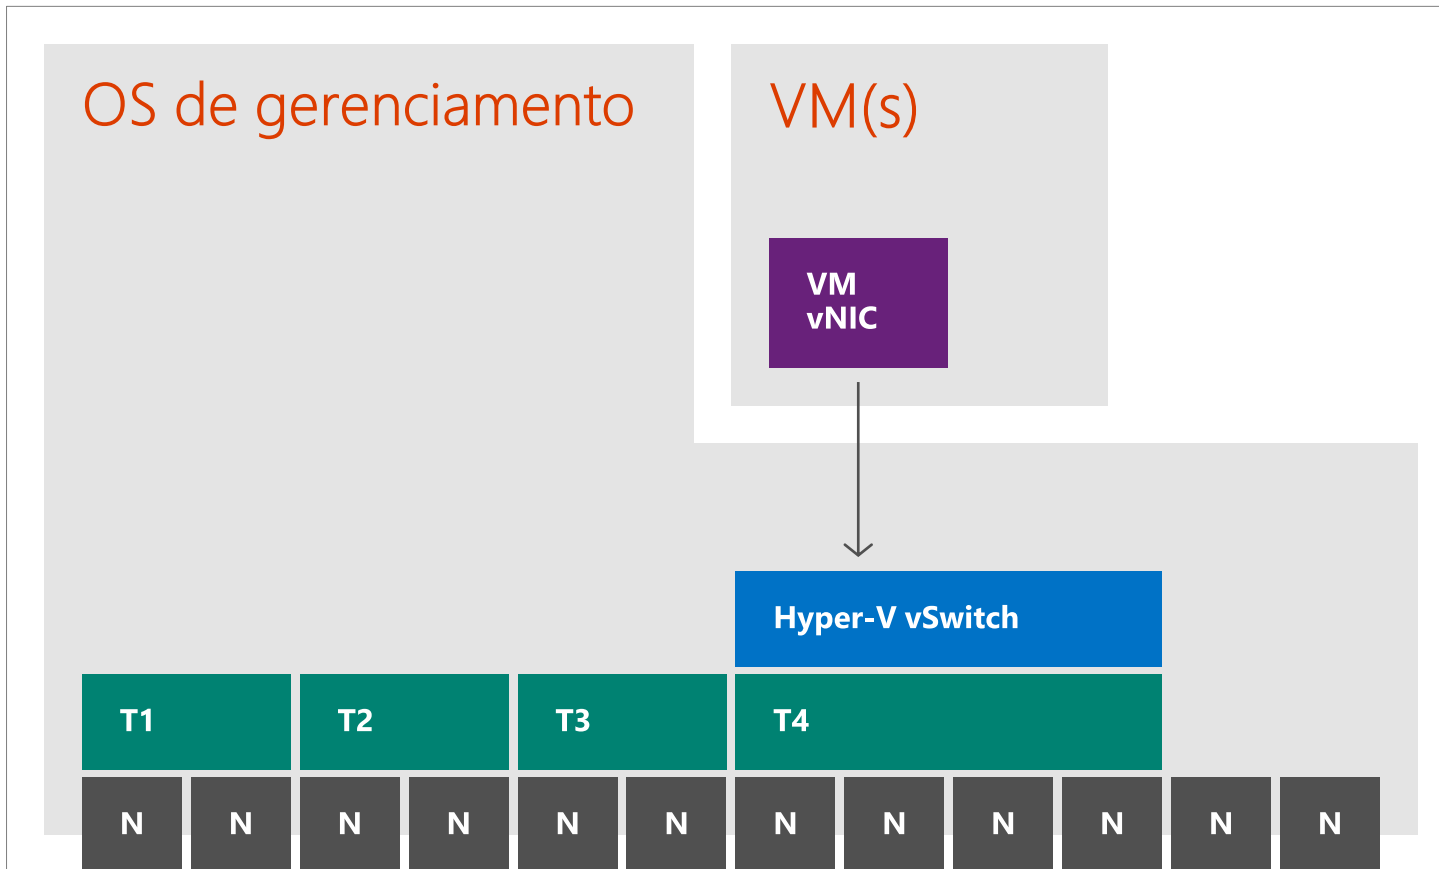

# Redes Convergentes: cenário atual

Host Hyper-V tradicional (não convergente)  
Exemplo 12 x 1GbE NICs

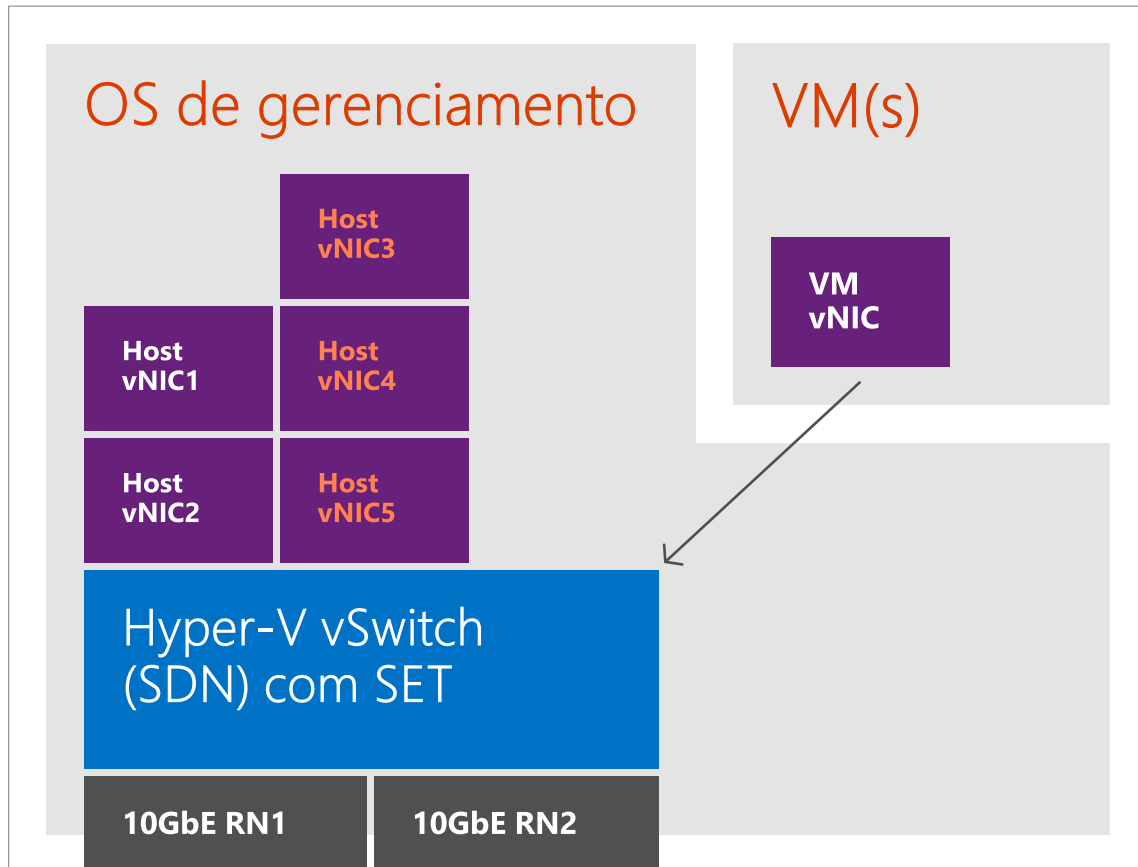

Cada host precisa de redes separadas para:

- Gerenciamento (Agentes, RDP)
- Cluster (CSV)
- Live Migration
- Storage (2 Subnets com SMB/SAN)
- Tráfego de VMs

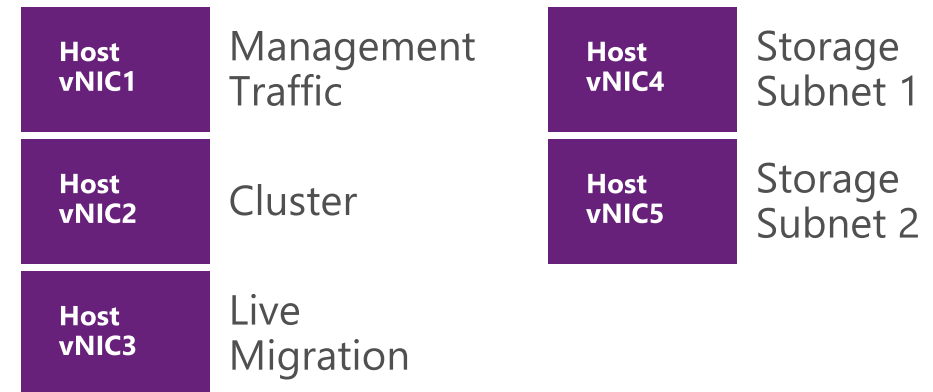

Resultado:

**Muitos** cabos, **muitas** portas, **muitos** switches, banda considerável.

# WS 2016: Redes Convergentes com RDMA

WS2016 Hyper-V Host (with converged)  
Example 2 x 10GbE RDMA NICs

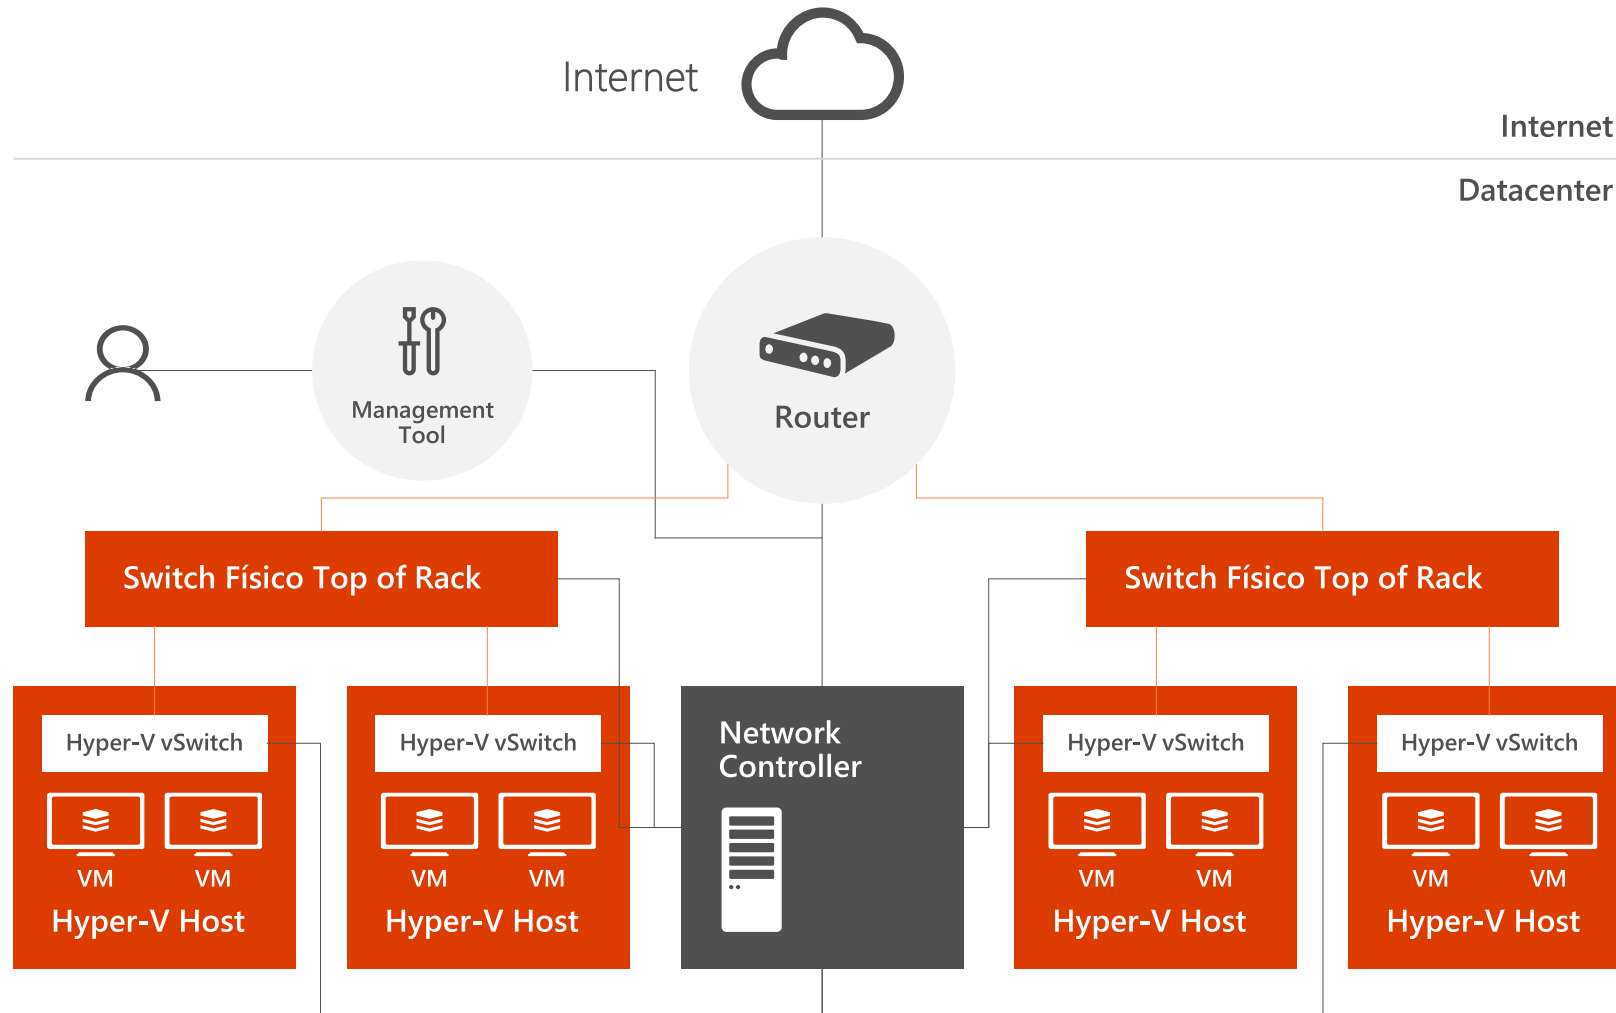

Use QoS para dividir a banda entre diferentes redes

```
Set-VMNetworkAdapter -ManagementOS -  
Name "Management" -  
-MinimumBandwidthweight 5
```

Host vNICs podem co-existir em diferentes VLANs

# Network Controller

Único ponto de automação para **gerenciar, configurar, monitorar e realizar** troubleshooting da rede virtual ou física

# Network Controller overview

Alta disponibilidade e escalabilidade

## Southbound API

Discovery de dispositivos, detecção de configurações e outras informações sobre a rede.

Provê caminhos para enviar informação para Infraestrutura de rede, como mudanças de configurações efetuadas.

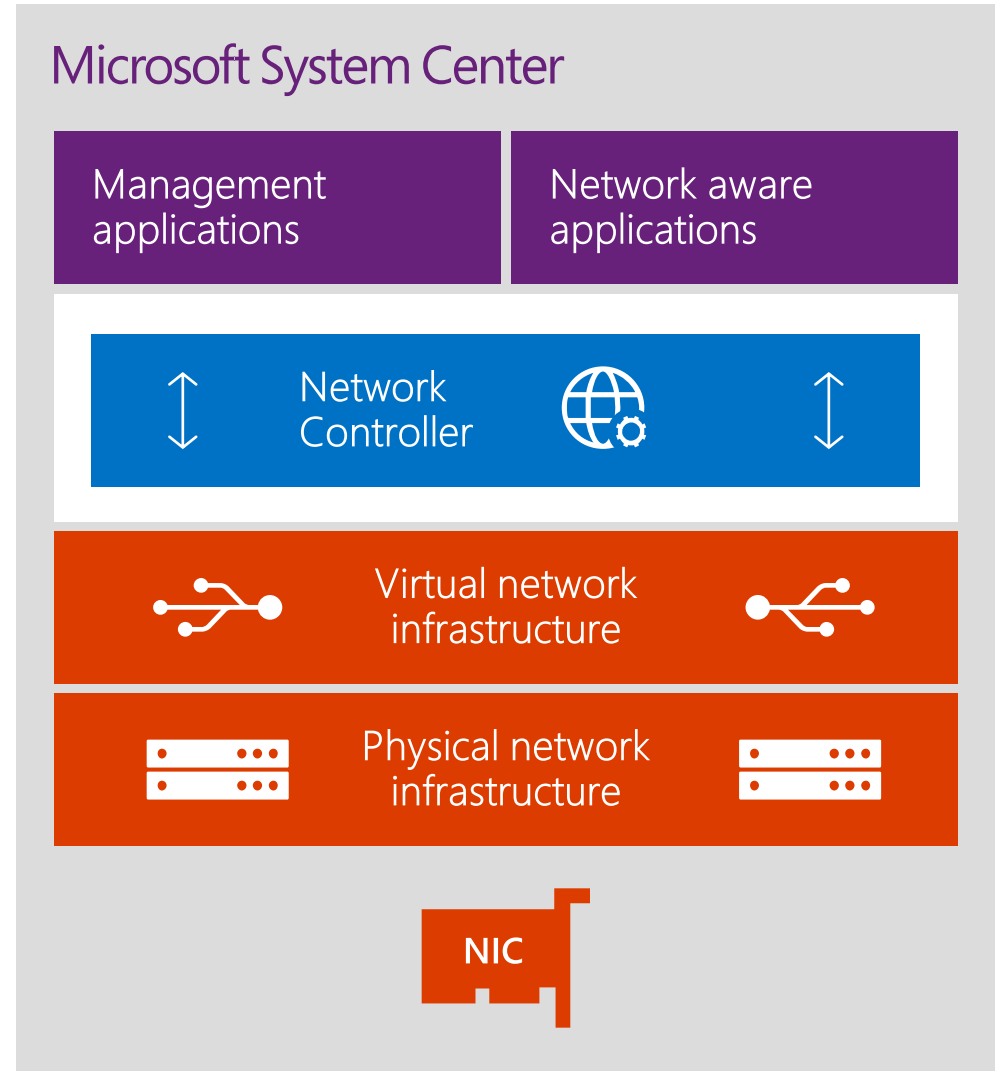

Conecta via OMI

## Northbound API (Interface REST)

Monitore, configure e execute troubleshooting de rede através desta interface usando Windows PowerShell, REST, SCVMM, SCOM etc.

## Gerencia

Hyper-V VMs & vSwitches, switches físicos, roteadores físicos, software de firewall, gateways de VPN, RRAS, load balancers...

# Network Controller: Funcionalidades

## Fabric Network Management

IP subnets  
VLANs  
L2 and L3 switches  
Host NICs

## Firewall Management

Allow/deny rules  
East/West & North/South  
Firewall rules plumbed into vSwitch port of VMs  
Rules for incoming/outgoing traffic  
Log traffic allowed/denied

## Network Topology

Automatic discovery of network elements and relationships

## Service Chaining

Rules for redirecting traffic to one or more virtual appliances

## Software Load Balancer

Centralized configuration of SLB policies

## Network Monitoring

Physical and virtual  
Active network data: Network loss, latency, baselines, deviations  
Fault localization  
Element data: SNMP polling and traps  
Limited set of critical data via public Management Info Bases (MIB) i.e., link state, system restarts, BGP peer status  
Device (switch, router) and Device Group (racks, subnets etc.) health  
Gathers network loss, latency, device CPU/memory usages, link utilization, and packet drops  
Impact analysis: Overlay networks affected by underlying faulty physical networks using topology information to determine vNext footprint and health  
System Center Operations Manager integration for health and statistics

## Virtual Network Management

Deploy Hyper-V Network Virtualization  
Deploy Hyper-V Virtual Switch  
Deploy Virtual Network Adaptors to VMs  
Store and distribute virtual network policies  
Supports NVGRE and VXLAN

## Windows Server Gateway Management

Deploy, configure & manage WSGs -> host & VMs  
S2S VPN with IPsec, S2S VPN with GRE  
P2S VPN, L3 forwarding, BGP routing  
Load balancing of S2S and P2S connections across gateway VMs + logging config/state changes

# Armazenamento Definido por Software (SDS)

Microsoft

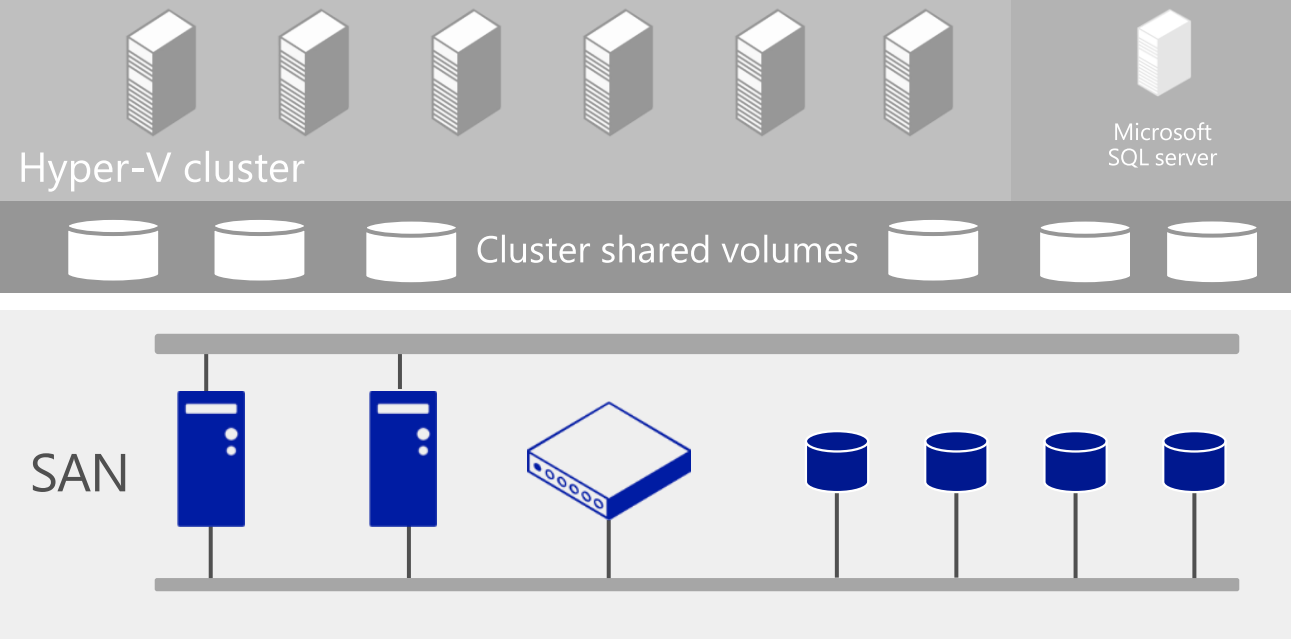

# Microsoft SDS: Evolução

ENTERPRISE-CLASS  
STORAGE PLATFORM  
BUILT ON WINDOWS

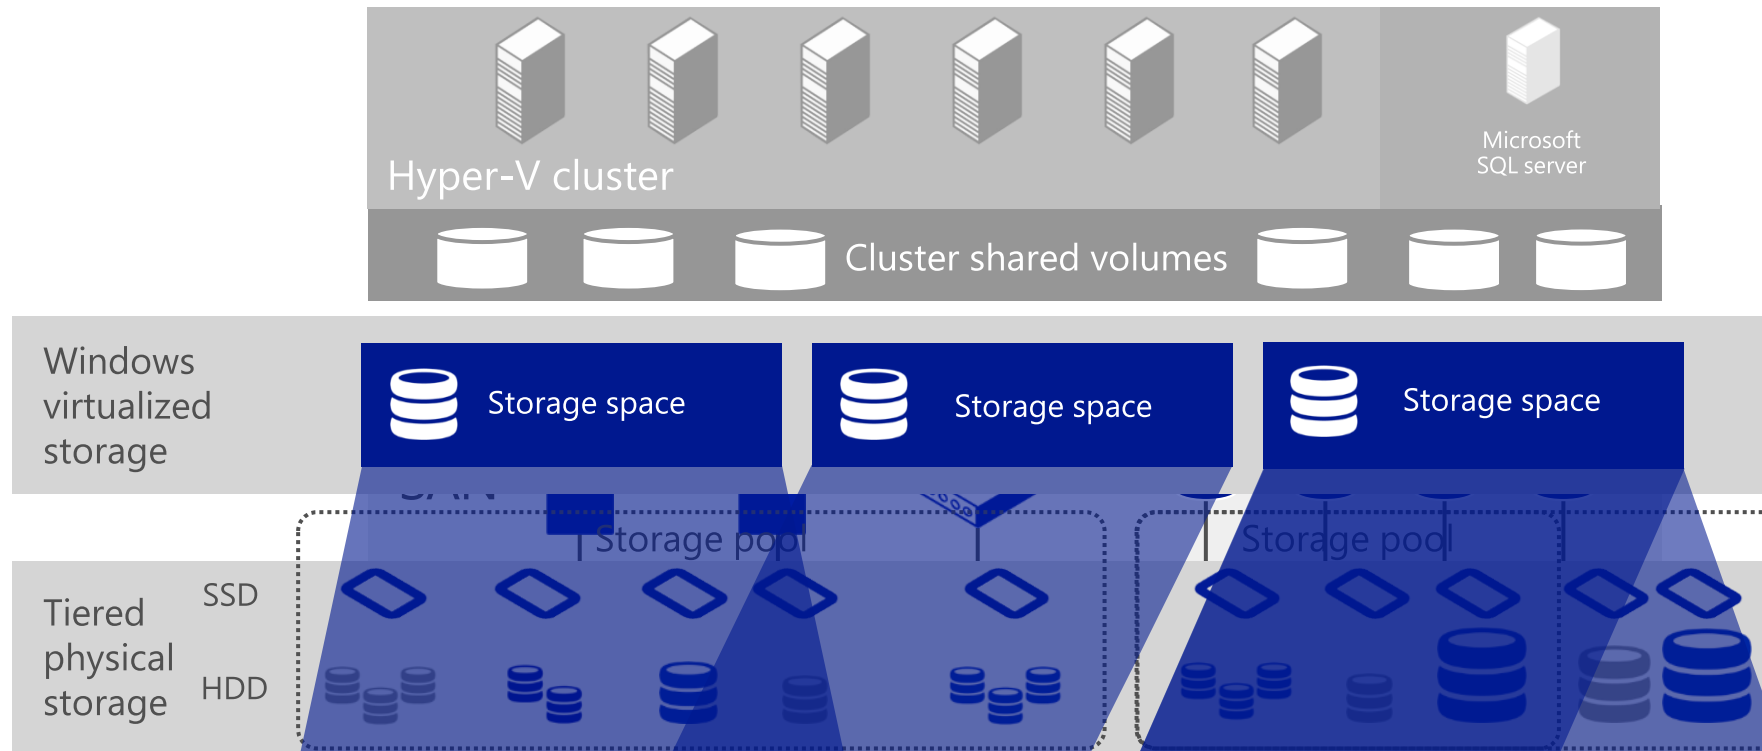

# Microsoft SDS: Evolução

ENTERPRISE-CLASS  
STORAGE PLATFORM  
BUILT ON WINDOWS

# Storage spaces

## Solução Windows para gerenciamento de storage

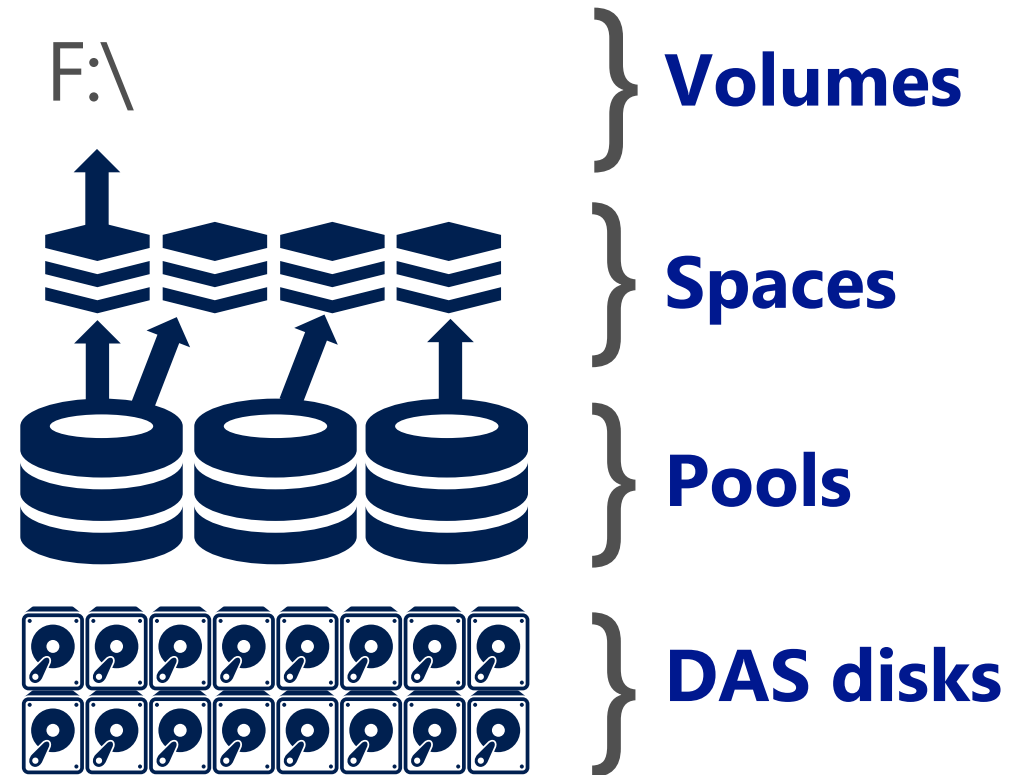

Virtualize o storage agrupando discos padrões de mercado em storage pools

Pools são divididos em discos ou espaços.

Espelhamentos possíveis:

- Simple (RAID 1)
- Mirrored (RAID 2)
- Parity
- Single (RAID 5)
- Dual (RAID 6)

Espaços podem usar somente DAS (local do chassis, ou via SAS)

# SAN vs. solução Microsoft de SDS

INDUSTRY PROOF  
POINTS AND  
RECOMMENDED  
CONFIGURATIONS

## Storage tradicional com FC/iSCSI array de storage

- Storage tiering
- Data deduplication.
- RAID
- Pooling of disks.
- Alta disponibilidade
- Cache write-back persistente.
- Copy offload.
- Snapshots.

## Windows file server cluster com storage spaces

- Storage tiering. (novo no R2)
- Data deduplication. (melhorado no R2)
- Flexible resiliency options. (melhorado no R2)
- Pooling of disks.
- Disponibilidade continua.
- Cache write-back persistente. (novo no R2)
- SMB copy offload.
- Snapshots.

# Evoluindo mais um passo...

ENTERPRISE-CLASS  
STORAGE PLATFORM  
BUILT ON WINDOWS

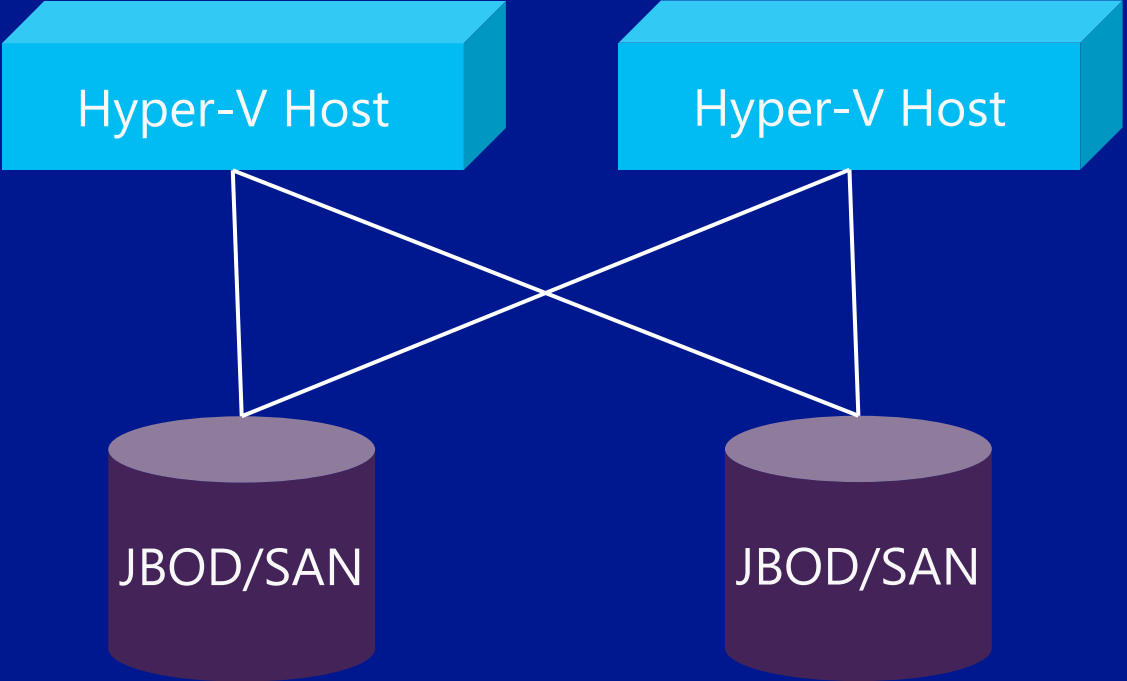

# Evoluindo mais um passo...

ENTERPRISE-CLASS  
STORAGE PLATFORM  
BUILT ON WINDOWS

# Scale-out file server (SOFS)

## Baixo custo, alta performance, storage compartilhado resiliente

Cluster de file server para armazenamento de VHDs, através de file shares

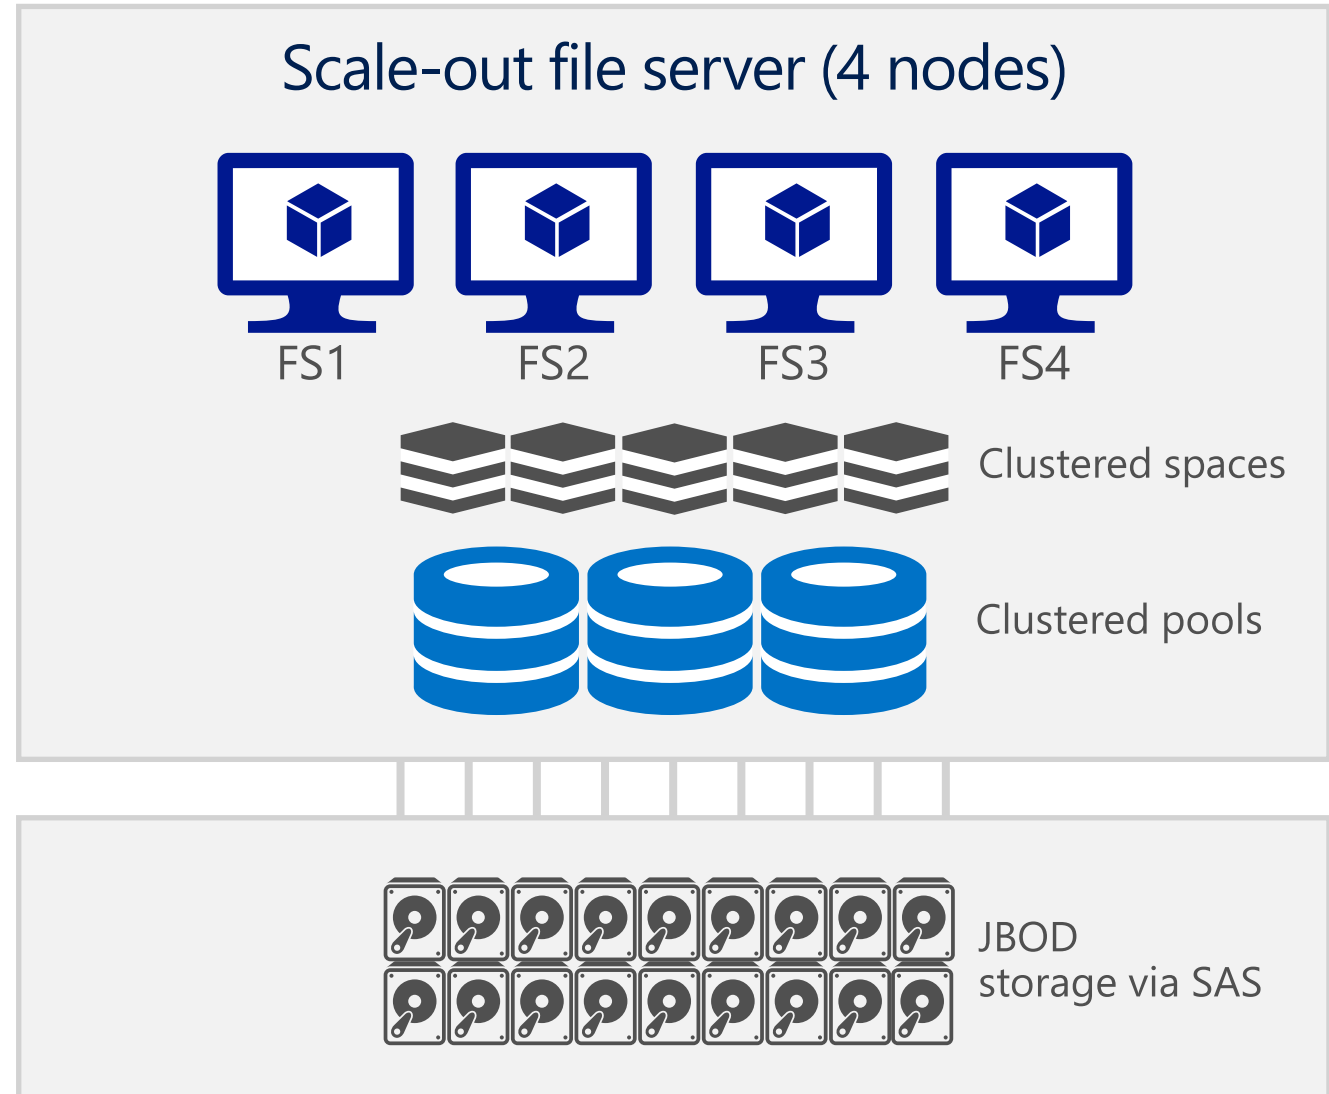

Alta confiabilidade, disponibilidade, gerenciamento e performance que é esperado de uma SAN.

### Nós Ativo-ativo

**Aumento de banda** quanto mais nós SOFS são adicionados

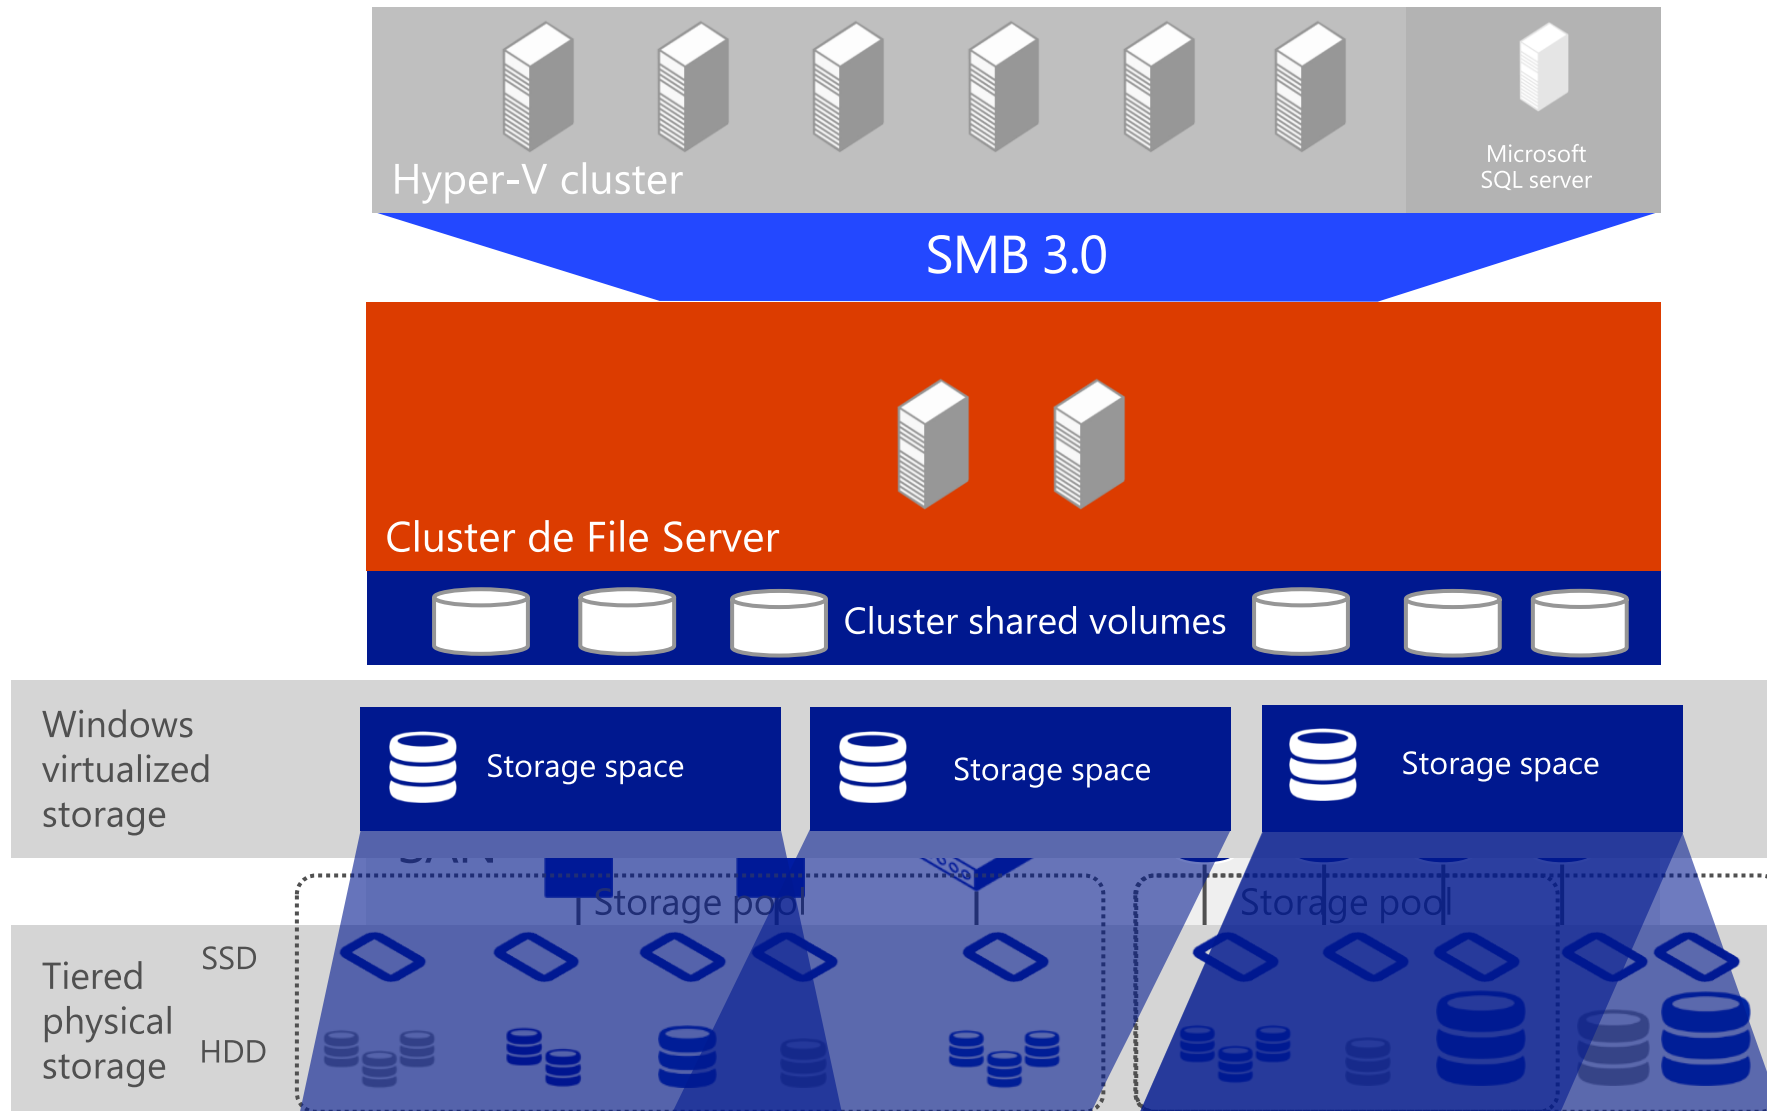

CHKDSK com downtime zero e cache CSV

Pode ser criado (deploy ou bare metal) e gerenciado pelo VMM

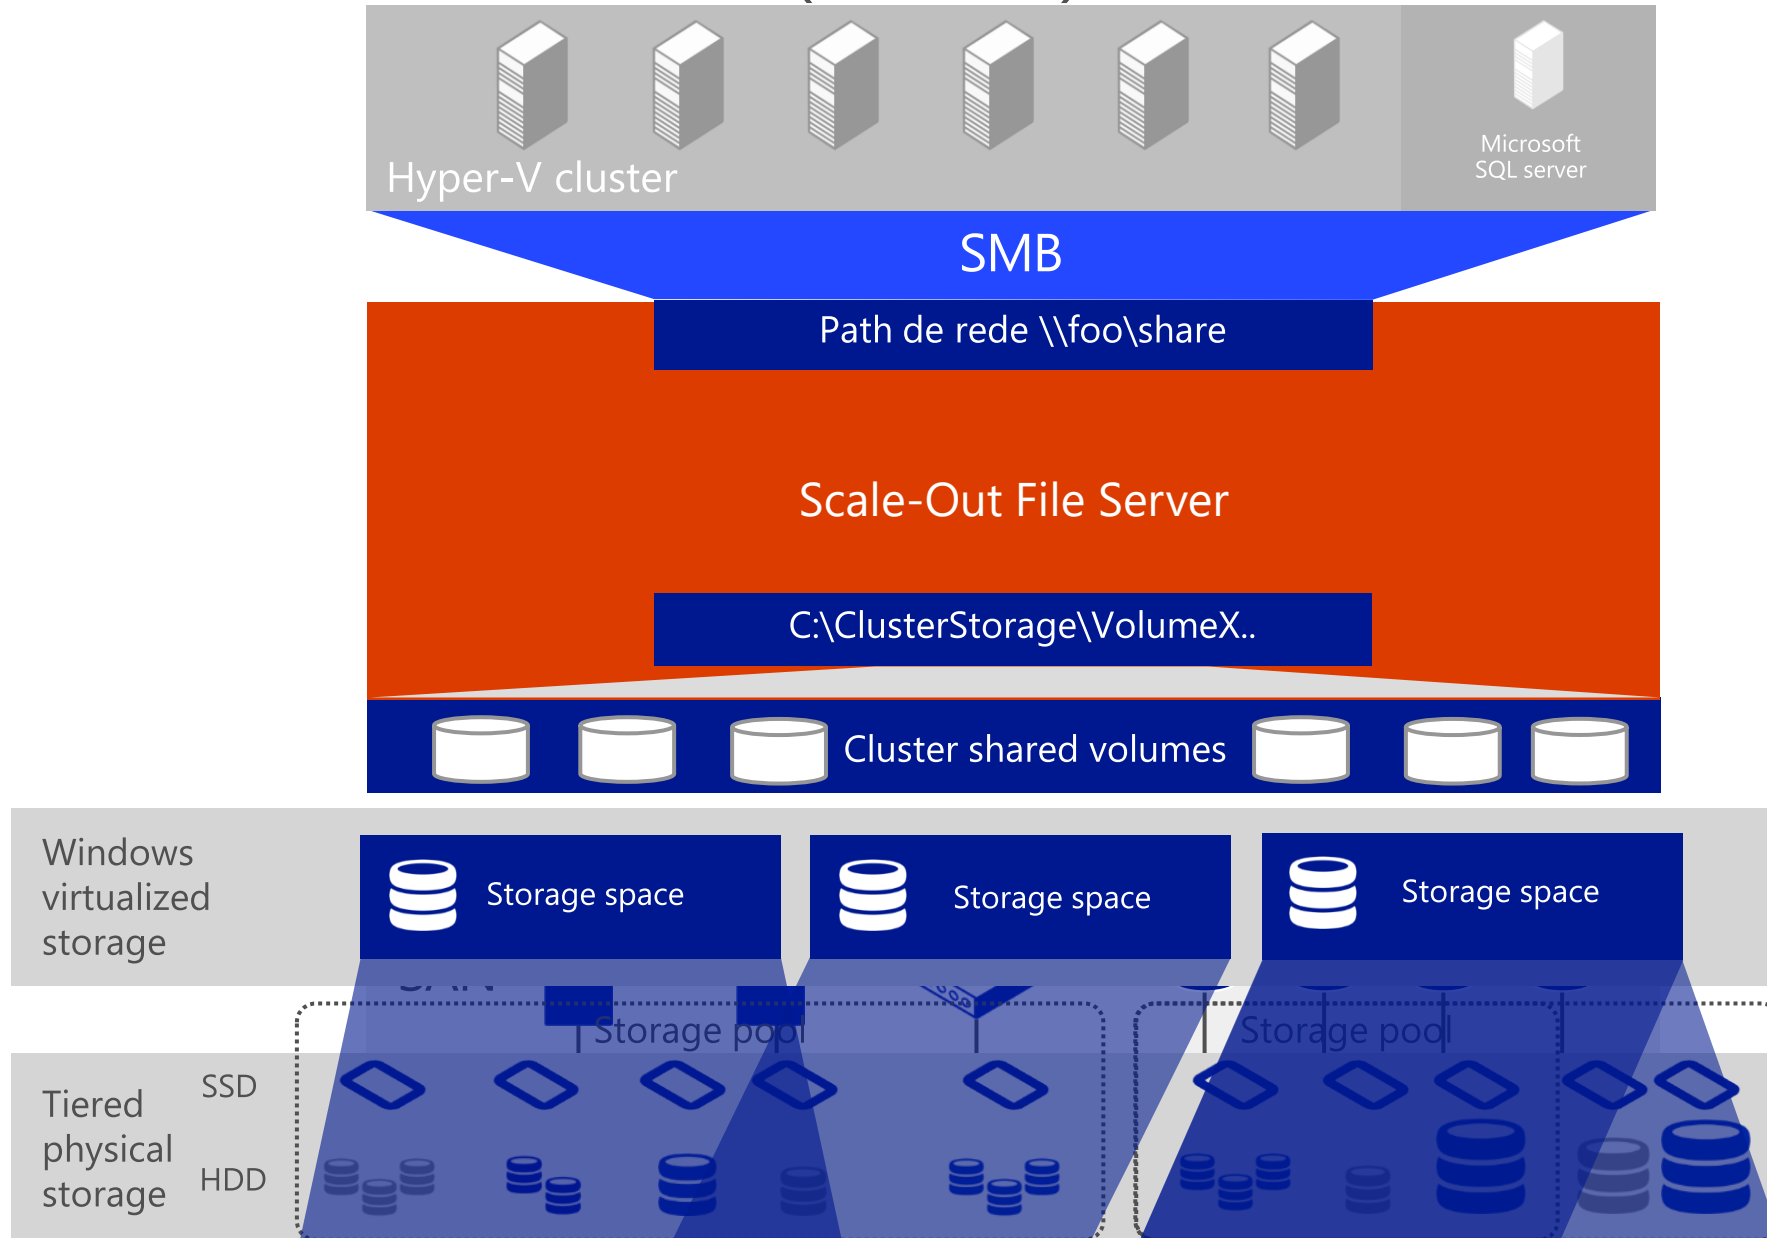

# Scale-Out File Server (SOFS)

# Storage Spaces Direct (S<sup>2</sup>D)

O que é Storage Spaces Direct?

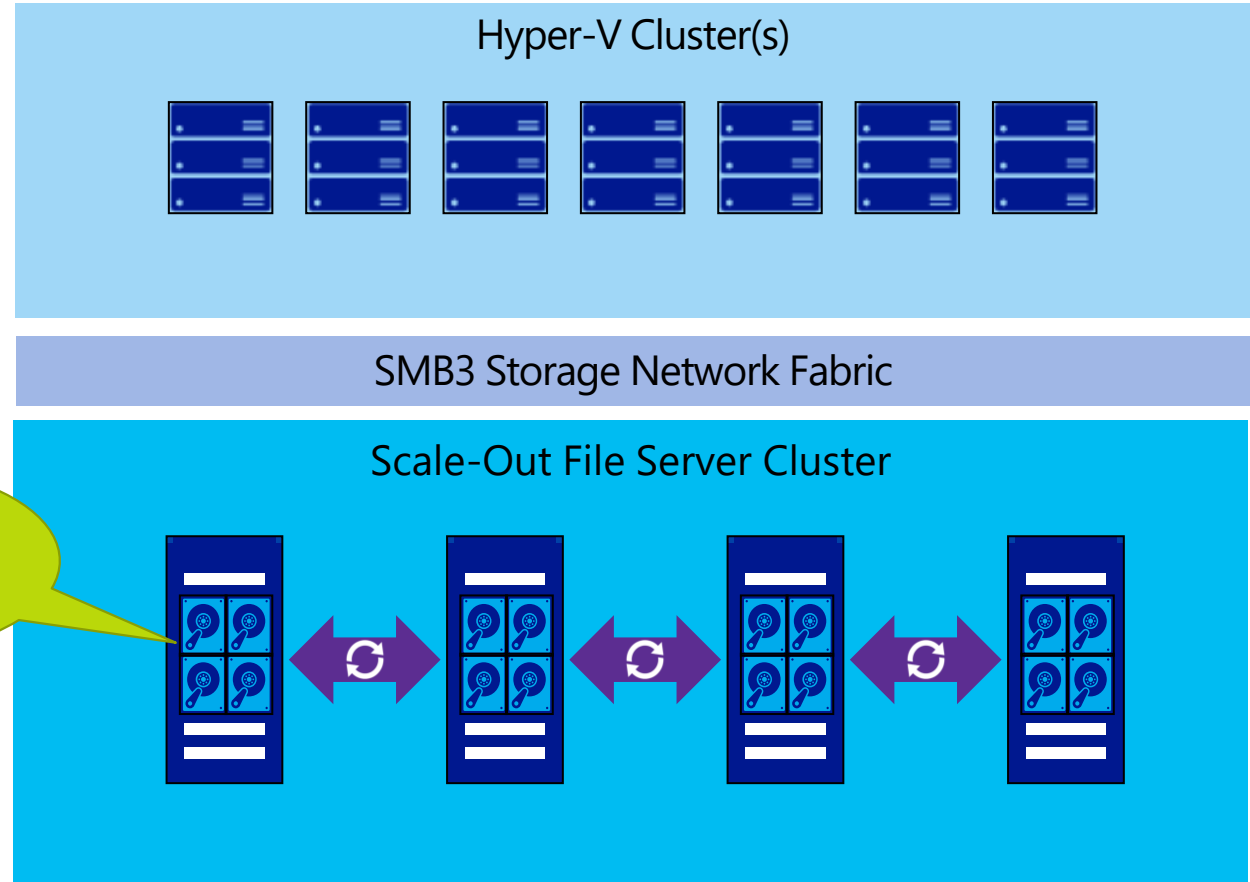

Evolução do Storages Spaces

Foco em storage de nuvem privada

Servidores com storage local

Alta disponibilidade e escalabilidade

Habilita novos cenários

System Center

# Por que Storage Spaces Direct?

## Novos tipos de disco

SATA SSDs (baixo custo)

NVMe SSDs (alta performance)

## Deployment mais simples

Trabalhe com fabric de rede no lugar da SAS

Arquitetura mais simples

## Requisitos de Hardware simplificados

Sem necessidade de MPIO

Sem necessidade de multicabamento SAS

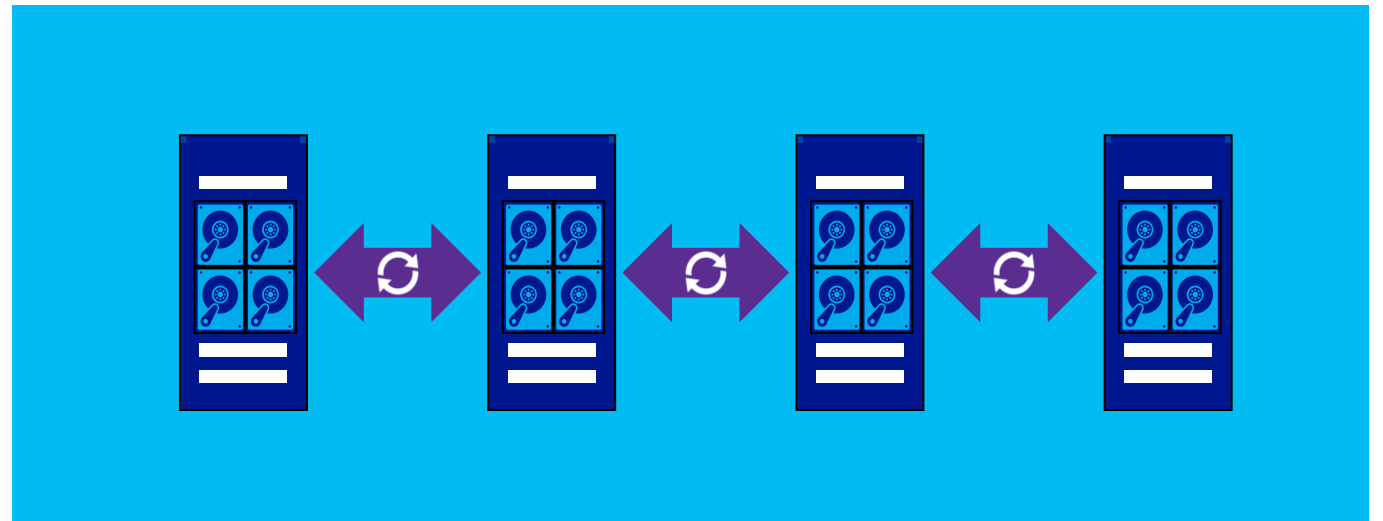

## Expansão natural

Simples: adicione mais nós

Rebalanceamento de storage

## Aumento de escalabilidade

Suporte até 400 discos e 16 nós

# S<sup>2</sup>D – Modos de deployment

## Hyper-Converged

Computação e storage juntos

Escalabilidade de computação e storage são gerenciadas juntas

Tipicamente para pequenas e médias implementações

## Disaggregated

Computação e storage separados

Escalabilidade de computação e storage são gerenciadas separadamente

Tipicamente para grandes implementações

OS AND APPLICATIONS - WIKI

---

**Disclaimer:** Dell does not offer support for Windows Server 2016 at this time. Dell is actively testing and working closely with Microsoft on WS 2016, but since it is still in development, the exact hardware components/configurations that Dell will fully support are still being determined. The information divulged in our online documents prior to Dell launching and shipping WS2016 may not directly reflect Dell supported product offerings with the final release of WS 2016. We are, however, very interested in your results/feedback/suggestions! Please send them to [WinServerBlogs@dell.com](mailto:WinServerBlogs@dell.com) or leave comments below.

---

For the past several years Dell and Microsoft have worked closely together to deliver fully validated Storage Spaces-based [private cloud solutions](#), Storage Spaces-compatible components, workload specific sizing, and optimized management tools based on the highest performing, most innovative [Dell PowerEdge servers](#) and [Dell PowerVault](#) storage enclosures. If you are looking to deploy a Windows Server® 2012 R2 based Storage Spaces solution in production today then please check out [Dell Storage with Microsoft Storage Spaces](#) blog for our fully supported and production ready shared-SAS Storage Spaces solutions information.

Storage Spaces Direct is a new storage virtualization capability introduced in [Windows Server® 2016 Technical Preview](#). Microsoft® provides very good overview and software configuration details [here](#).

Storage Spaces Direct is significant step forward in Microsoft Windows Server software defined storage (SDS) as it simplifies the deployment and management of SDS systems and also unlocks the use of new classes of disk devices, such as SATA HDD, SATA SSD and NVMe, that were not previously possible with Windows Server 2012 R2 clustered Storage Spaces systems.

# 1.000.000 IOPS?

GS4 Standard		GS5 Standard	
16	Cores	32	Cores
224	GB	448	GB
	32 Data disks		64 Data disks
	Max IOPS		Max IOPS
	448 GB Local SSD		896 GB Local SSD
	Load balancing		Load balancing
	Premium disk support		Premium disk support

**1.000.000 IOPS**  
**=**  
**12,5 x VM G5**

# Storage Replica

**Replicação síncrona:** Espelhamento de dados em sites físicos com volumes uniformes independente do armazenamento para garantir perda zero de dados no nível do volume.

**Maior resiliência:** Libera novos cenários para recuperação de desastres cluster a cluster a metro-distância e clusters de failover estendidos para alta disponibilidade automática.

**Flexível:** Servidor a servidor, cluster a cluster e cluster estendido. Discos locais, Storage Spaces Direct, discos em cluster. NTFS, REFS, CSVFS. TCP, RDMA. Síncrona e assíncrona.

**Gerenciamento dinâmico:** Gerenciamento gráfico para nós e clusters individuais por meio do Gerenciador de Cluster de Failover e Azure Site Recovery. Suporte completo ao PowerShell e SMAPI.

Microsoft

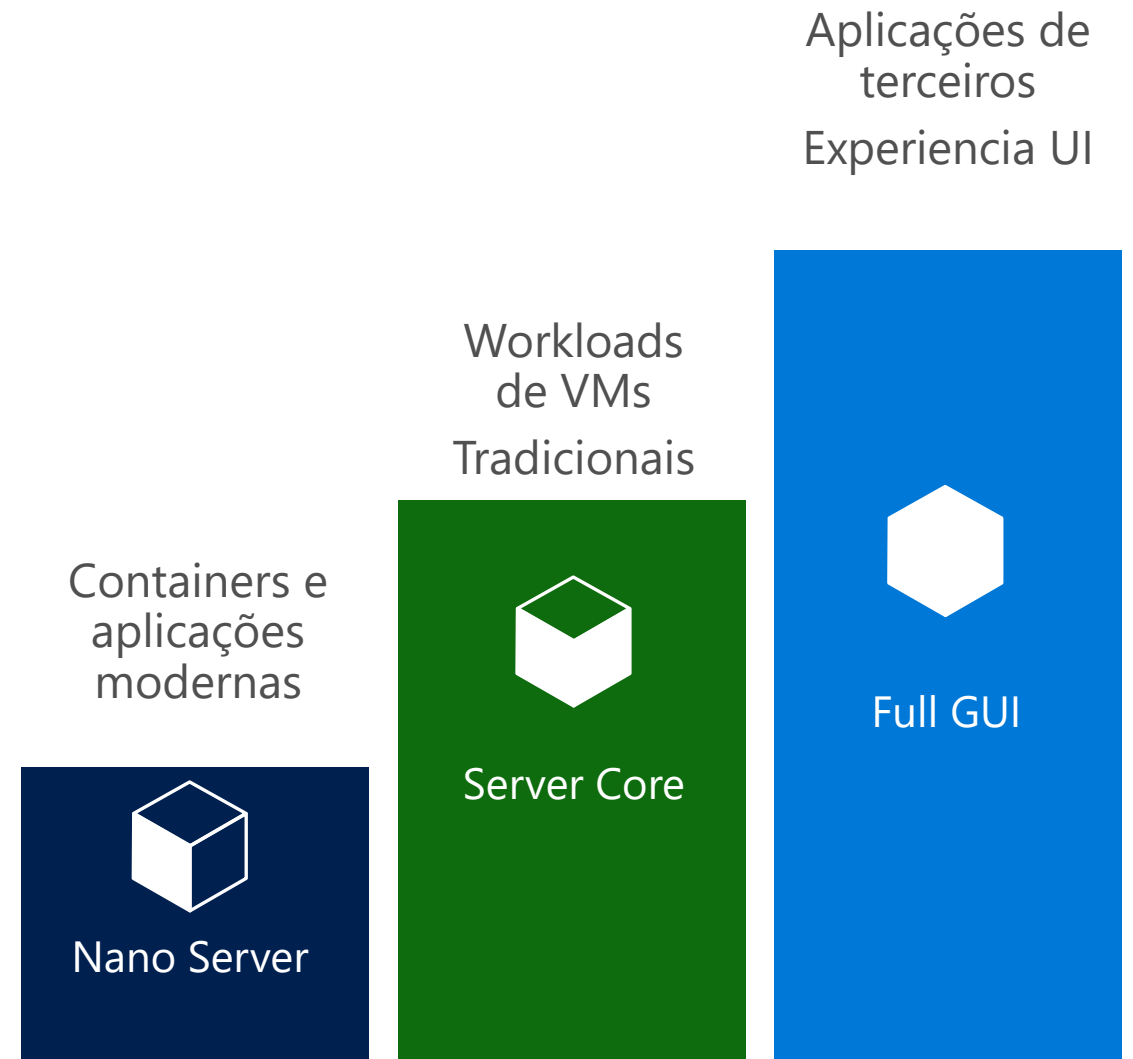

# Nano Server

# Nano Server

- “Just enough OS”
- Otimizados para aplicações modernas
- Alta densidade e performance
- Redução da superfície de ataque
- Framework para próxima geração de apps distribuídas
- Interoperabilidade com servidores existentes

# Resultados Preliminares

## Patches Críticos

## Reboots

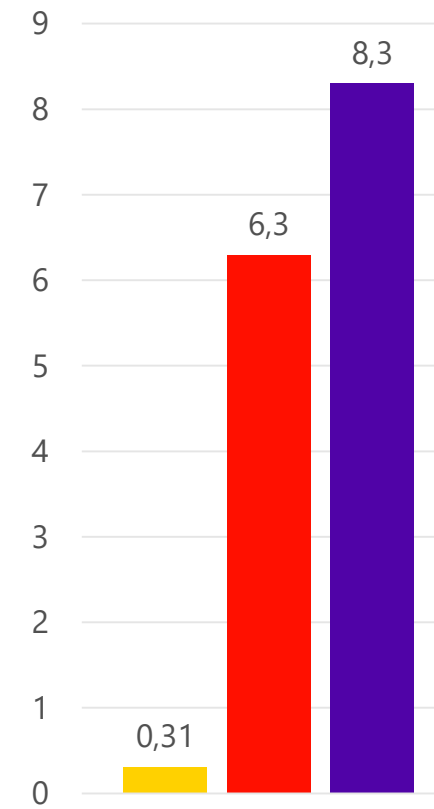

## Tempo de setup (s)

## Portas Abertas

## Tamanho VHD (GB)

 Nano Server

 Server Core

 Full Server

# Nano Server

## Modelo "Just enough OS"

- Features adicionais e Serviços
- Funções e Recursos estão fora dos binários do Nano Server
- Pacotes são instalados

## Recursos principais e funcionalidades

- Hyper-V, SoFS, Clustering, IIS, and DNS Server
- Windows Defender, TPM, SIL, PowerShell DSC
- .NET Core and ASP.NET Core

## Suporte a drivers do Windows Server

- Suporte a instalação de drivers baseados em INF
- Instalação offline de drivers via PnP

## Agentes SC VMM e OM

“ Usamos para aumentar a densidade de VMs; ao invés de 8 VMs por hosts, aumentamos para 12 a 14 VMs no mesmo hardware. Segundo Morimoto: “Somente com o uso do Nano Server reduzimos nosso overhead de operações em 70%” ”

**Rand Morimoto**  
CEO  
Convergent Computing

# Containers

# Por que containers?

Densidade

Flexibilidade

Consistência

Isolamento

Velocidade

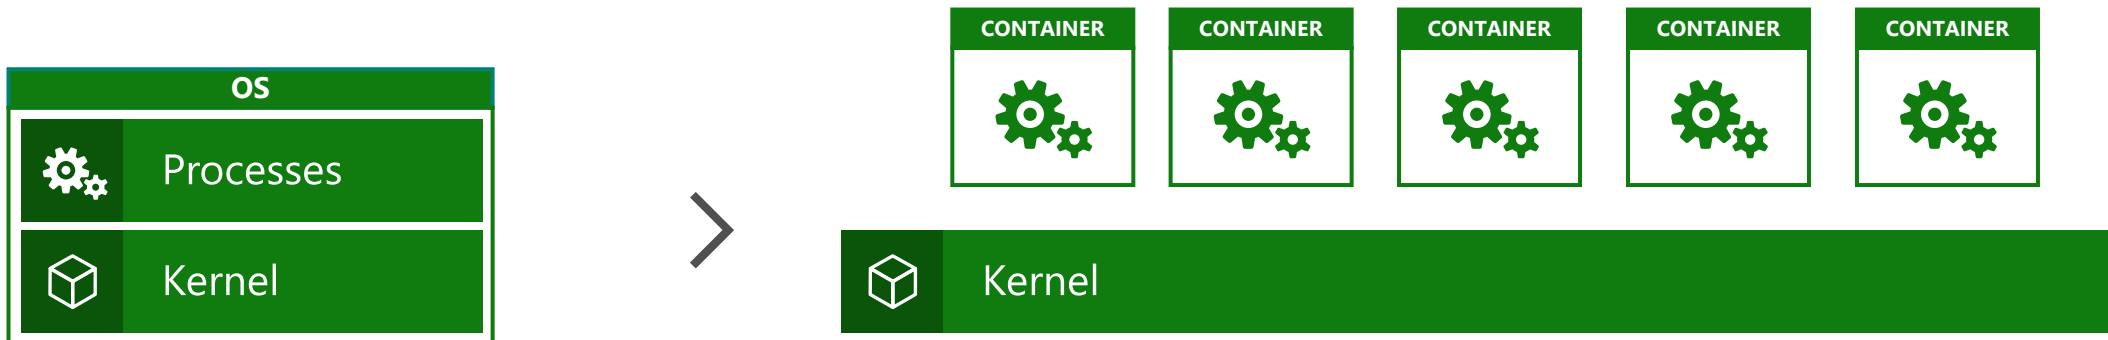

# O que é um container?

**VM** = virtualização do hardware

**Containers** = virtualização do sistema operacional

# Windows Server Containers

## Em destaque:

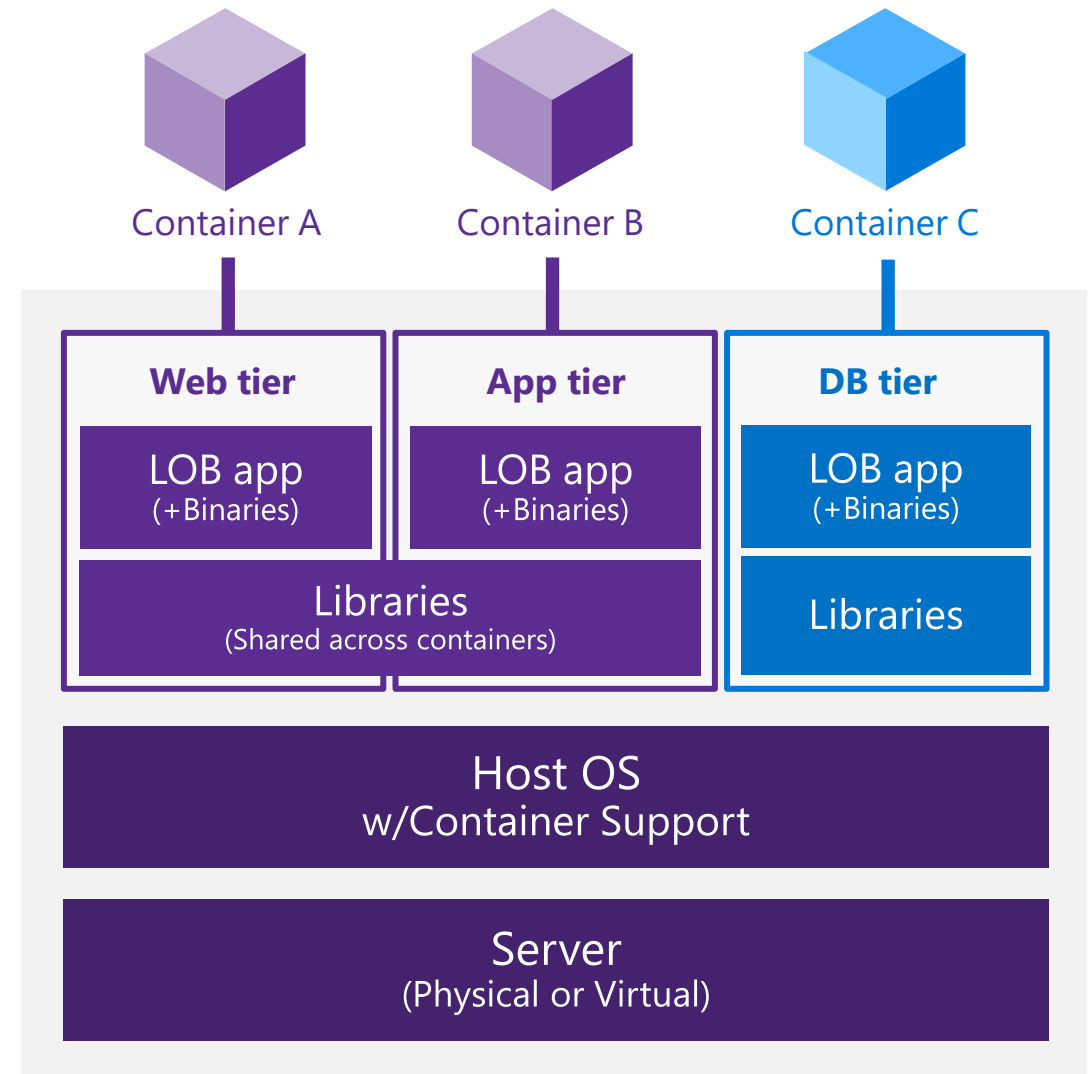

**Construção:** escreva, execute e escale com containers

**Execução:** suporte à containers é nativo no Windows Server

**Gerenciamento:** gerenciamento e deploy usando PowerShell

**Recursos:** defina recursos por container

**Rede:** opções de ip para conectividade

# Hyper-V Containers

## Em destaque:

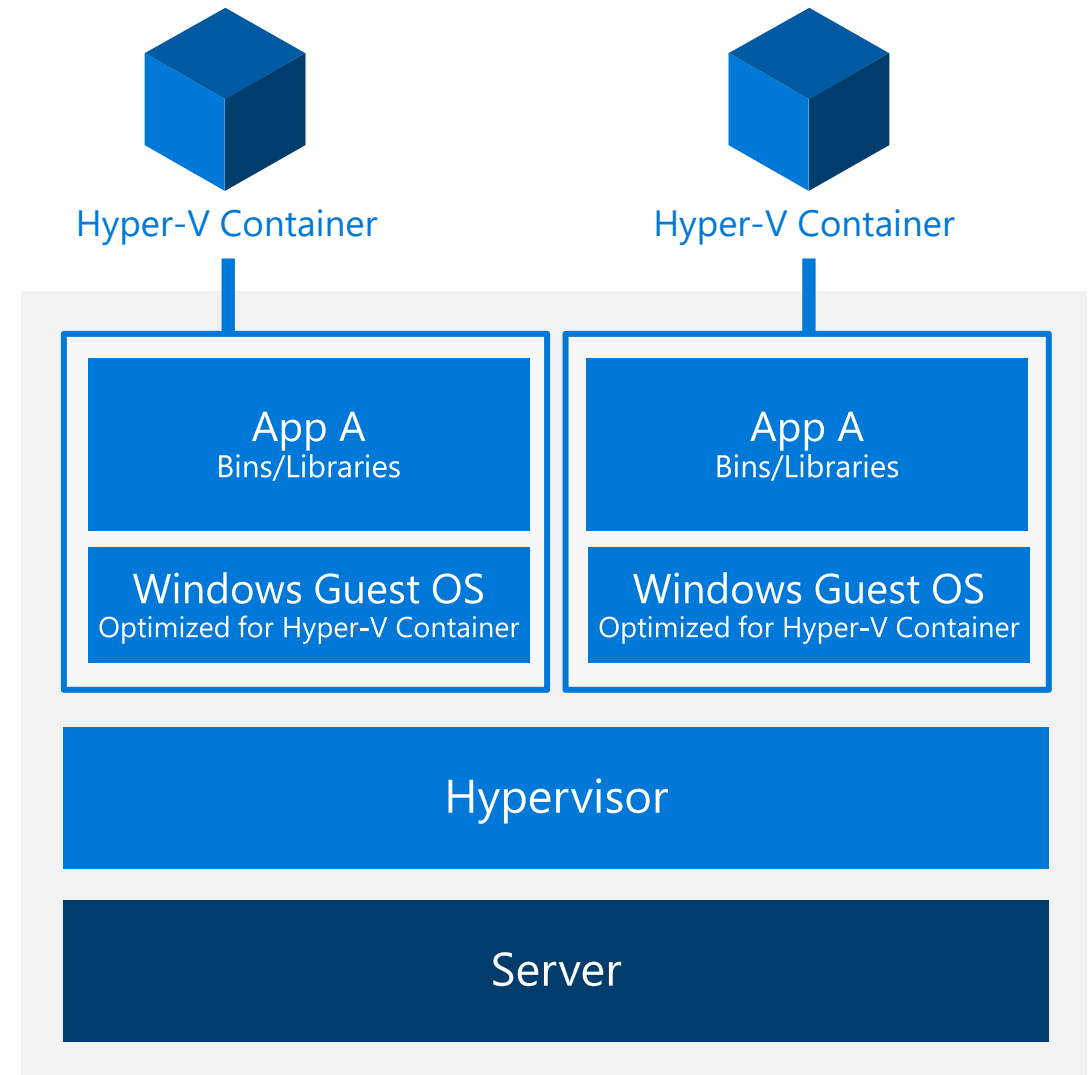

**Consistência:** APIs consistentes com containers

**Compatibilidade:** imagens dos containers idênticas

**Forte isolamento:** cópia do kernel dedicada

**Altamente confiável:** usa a tecnologia Hyper-V

**Otimizada:** camadas de virtualização e OS otimizadas

# Por que Hyper-v Containers?

**Isolamento:** imagine um hoster hospedando sua aplicação compartilhando o kernel com outras aplicações de outras empresas..

**Patches:** Imagine um hoster aplicando um patch em um host com n containers compartilhando o mesmo kernel...

# Containers

```

WS Containers -> Hyper-v Container  
Como converter?

```
Set-Container "MyContainer" -RuntimeType Hyper-v
```

# Container Fundamentals

# Docker integration

Joint strategic investments to drive containers forward

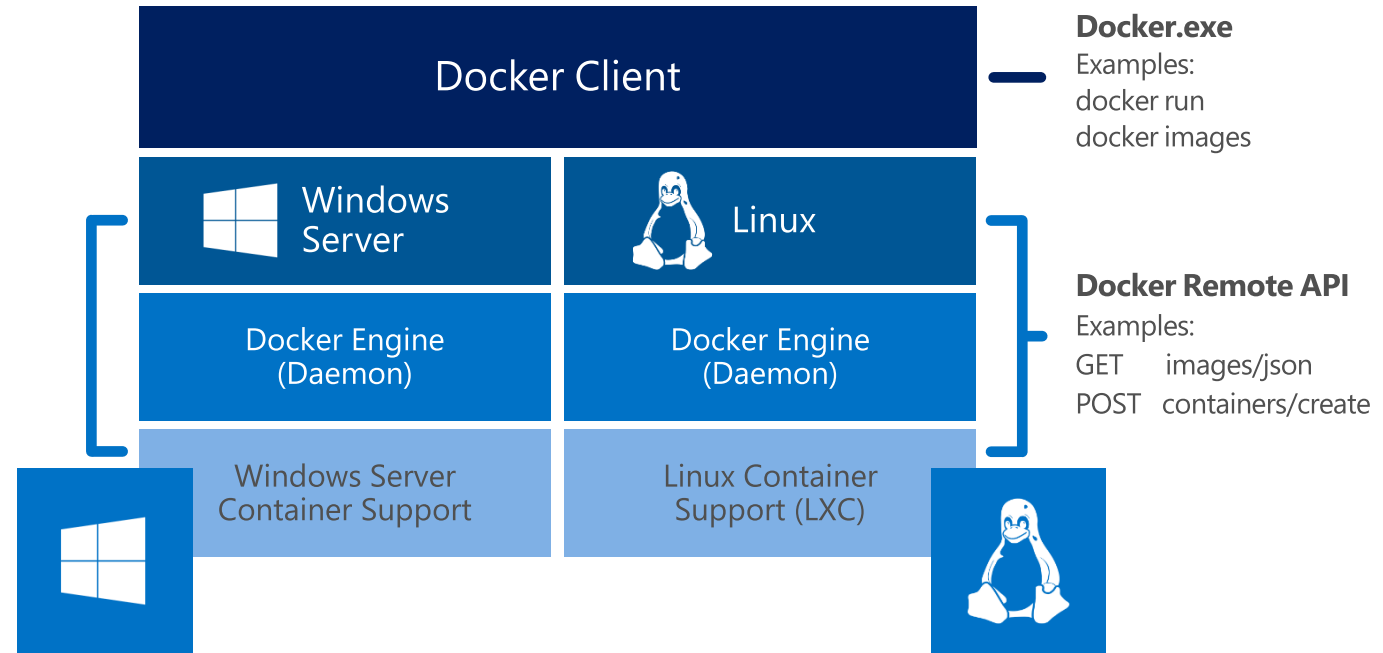

## *Spotlight capabilities*

**Docker Hub:** Huge collection of open and curated applications available for download.

**Collaboration:** Bring Windows Server containers to the Docker ecosystem to expand the reach of both developer communities.

**Docker Engine:** Docker Engine for Windows Server containers will be developed under the aegis of the Docker open source project.

**Docker client:** Windows customers will be able to use the same standard Docker client and interface on multiple development environments.
